

159<sup>th</sup> Knowledge Seekers Workshop 16<sup>th</sup> February 2017

<https://www.youtube.com/watch?v=2oGpmE-r2tk>

The 159<sup>th</sup> Knowledge Seeker workshop deepens into the 4<sup>th</sup> year of workshops, from the new home base in Accra, Ghana, which is being developed very rapidly as the World Center of the KF, with its Medical Center, Space Ship Center, and Centers for the Universal Council and the Earth Council. This workshop nudges us closer to the knowledge of the crucial role of Hydrogen Gans in the Space ship development, and also reminds us of the central role of our emotions in space ship construction, as well as the fact that that the ultimate form of the spaceship is in the human body mind and soul. Then there are a few questions and demonstrations as per the hyperlinked headings following.

[Development of Space Center, Universal Council and Earth Council Center in Ghana](#)

[The younger generation will take over the spaceship program](#)

[The next step for us in every aspect is to convert the work into the single mono plasma](#)

[Learn that man in space can last millions of years through the existence of his soul.](#)

[The creation of the universe has been one of the secrets of the creation of the man.](#)

[We teach the building of the spaceship in the soul of the man, which has no dimension and no physicality.](#)

[When you look at the gans in your containers think how much of my emotion does this gans understand?](#)

[The more you give the more you receive](#)

[A question about donating money](#)

[The combined Spaceship Center, World Council and Universal Council Center is where we negotiate for Universal Peace.](#)

Azar: the second question goes back to the ZnO gans. If I have 7 or 8 ZnO gans do I put them all in one sphere and see how my emotion is?

How can an emotion be so strong or strengthen that it leads to instant results?

Right now in NY they are planning for war with Iran. Can we wish for world peace?

Ruthie shows some pictures of GANS

John shows electron microscope pictures of nano-coated copper

Rick shows bands of gans in a horizontal rotating sphere

Some questions on carbon gans from Wanqing

W: what machine can we use to test the gans?

We must continue with the ethos of the Kf

1012 Rick (R): Welcome There will be a discussion on nano coating and other topics Mr. Keshe (K) chooses.

1039 K: Good morning, good day wherever and whenever you listen to the teachings. As you are all aware we are moving into different directions and some of us are learning about nano coating and some of us are further along in the gans and some people have moved into the production of hydrogen for space development. **In the past week or so we have seen production of two different kinds of hydrogen in one experiment and this is being studied further. This allows us to go to the steps of fueling for the space reactors with mono atomic plasma fuel, which gives us a huge opportunity to do different experiments. As I said before I have shared the knowledge of the creation of the mono plasmatic hydrogen to two of our close researchers.** We have seen some development and as it goes it is done in a specific way so we only get what we are looking for.

202 K: we see that we get ready for the proper ways to do the space flight. As part of the same process we have explained before the choice of Accra and now we have been given premises to build the spaceship launch pad. This brings huge opportunities for scientists around the world to do this. We are planning and now we start bringing in the architects, designers and developers for the design of the space ship and what we call facilities in Accra. We have brought in some architects to start. In the next week or so, in the beginning of March, we start laying the first stones for the develop the site which will be exclusively for the spaceship program including the space ship program, the launch pad, the hospital and facilities to be able to use indoor and outdoor launch spaces.

1323 K: With the help of the KF collaborators we are going into the next step of bringing the spaceship program into reality. We are talking with different governments and organizations for their input before the building. The structure we build we will be a one story block across the whole facility. The manufacturing and factory will be part of it; the research and development will be part of it. The space launch pad and hospital will be part of it. We will be given more facilities as we need as there is a large amount of land that the Atomic Energy commission owns that we can use. This puts huge pressure on us to start raising funds for the development. We are looking for support. Those of you who have experience in making cores and understand the development, we call upon you and your own interests to join us in Accra to start building the first structures. We will facilitate static and dynamic systems and everything else and have the factory near us. There will be no shortage of materials.

1500 K: we are launching today the efforts to raise \$250 million or 250 million Euros for the building of the site. KF through its own work will meet most of this demand. If you want to be part of this or support the development and building of the site, you are quite welcome to join. We are looking for donations for the first time for the foundation to build the site. What we have decided we will do we will put live cameras in different locations so people can see the buildup and monitor how it is happening and the way it is happening. We may have to wait a couple of months to start the final position. We have been told we have a free hand to build and there are no restrictions on what we call the site as long as we follow the regulations.

1556 K: because in the position we are, we are exempt and covered by a lot of the governmental organizations. This allows us the rapid development and building and hopefully the first layout will start the first week of March. I put out this appeal for raising funds to build because this will belong to all of humanity. On the other hand on the site we build the first step of creating a permanent residence for the Universal Council (UC). At the same time and place we will facilitate the building of the World Council chamber. As you understand KF has reached the point that building of the UC meeting point for replacing the UN and the building of the one world government leadership with the 6-member council will start in two weeks' time. So we give it a permanent address and position. And then position will be made for the council to have a sea front position so that you do not need to reach the council with the problems we see with the UN of a government having to approve your entry to be able to enter the UN which is supposed to be a free land.

1727 K: these are all in the pipeline but as the first of February (March?) we lay down the first stones for what we call creation of the UC's permanent residence and the World Council permanent chamber. It is appropriate to be at the same site as the first spaceship launch pad. We carry out the tests and the launch site and as you know the Ghanaian government is the only one that has signed the peace treaty for themselves without any one from outside. We showed this as a nation of peace long before January, 2017. We have entered what we promised for 2017 and there is a lot of work to be done. There is a management discussion tomorrow at KF to discuss the steps to be done. I am stepping down from a lot of positions to be able to see what the final steps are to be done. You will see new people around the KF who are taking over the running of it. We have turned over the management of the KF to a new lady and she is doing very well.

1854 K: I don't have to take the responsibility to carry this out. My position is to see that what we call the spaceship institute with all the facilities for development of the space system, support of the space system, creation of the UC and the work of the UC to be operational this year. We know this takes a lot of time and has taken a long time to get where we are. But for the first time we have the position that we can build up and we can support the building of other facilities in Accra. So, in a way KF Ghana becomes the focus point of worldwide KF supporting everything possible. We are working with government organizations and different authorities to see this

through. And in the coming time we have shown that this was one of the best solutions.

2003 K: the placement of the spaceship institute in Accra will be the position where most of the initial public flights should take place. We have the fuel, we are getting dynamic reactors inside in the next couple of weeks and we start not only the factory but the research in the dynamic flight system with mono plasmatic fuel from Accra in the next month or so. We are training scientists to be able to do this and this is the next step for us. So as we said we have a lot to discuss and we have to be done. We are requesting for KF supporters worldwide to donate towards the building of the whole site whether it is the space launch pad, research center, the WC, the UC, the factory, the research center and the rest of it. The research center will be one of the most powerful sections of the work. We will facilitate in time that the scientists of KF will not require visa restrictions. If you are KF supporters in dynamic reactors and agriculture side, we try to make it literally easy for you to get in.

2154 K: the reason we have chosen one story block firstly is that we have plenty of land. Being on the flight site you don't have to be 'up' so you can be touched. We have enough facilities to support one story block speed from every angle. We are not looking to stand out. We are looking to be practical so we can do everything possible. One story block allows us to create rapid development and we can build huge, flat structures in a matter of weeks. That doesn't put pressure on us. In trying to create facilities that are multi-story we create problems in all sorts of directions. But this allows us to be very practical and allows us to push forward with the development. We will put brick and cement factories onsite so there are no restrictions. Everything will be in line with what a space system should be.

2312 K: we need a lot of support. Ghana and the technology of space and the spaceship program is very much in its infancy. Most of you who have tested different kinds of dynamic systems, flights systems or anything in agriculture can come in and teach others from across the world. We make a pan-world platform; it is non pan-Africa or pan-European so you can come in and teach, learn and go. This is the plan. We are looking for those who can bring in the dimensions of the spaceship technology and the dynamic systems into Accra. We use Ghana as a Center of Excellence for Spaceship Technology. We have a government that is coming into peace and we have

a peaceful nation. With that we bring the ethos of the KF for world peace in one place.

2422 K: We have to understand this has taken a long time to become what it should be and it won't be overnight. So, from now on the speed of the growth of the spaceship center depends on how we get support and contributions from every aspect—scientifically, financially, structurally. In every way we need to develop this to the position of excellence. When it has become that then we have moved on.

### [The younger generation will take over the spaceship program](#)

**2504 K: I have to step down firstly because of my health and secondly because of the condition of the spaceship program we need to bring new generations in. What we look and what we see is that the old generation is anybody over the age of 30 to 35 in this game.** The new generation whether by accident, coincidence or development of new technologies has been brought up differently. We as the elders will not be able to tolerate months and years in deep space. We are used to ground and to the earth. We are used to other things – we could take excursions for a short time. Confinement of the space ship is not for a lot of us. The new generation of the computer boys and girls spend a lot of time peacefully behind the computers and the computer games. They are the future of the spaceship program.

2619 K: we see change in the behavior of our children through this technology that we call computer games. Some of them play violent games and that can be changed. But, most of them play games and interact for hours and days on end. They don't need anything for their existence and they are in their own space. This is what is going to be in the space programs of the future. How much research can you do? How much development can you make? We are looking and watching the generation of the spaceship children who are already in the ages up to 25. They have been brought up and spend hours and hours and days behind the game consoles. The confinement of space needs this passive mentality that it doesn't lead to degradation (? 27.23 minutes).

2723 K: we are gradually seeing the development of the generation of the space people. These are people who can spend time not necessarily in

computer games but in the way of developing the space technology in the same manner to move from electronic consoles to the understanding of the brain and communication through it. We see them and how they play on these consoles and how they predict and save different dimensions that allow them to think beyond the dimension of physicality, which is in the world of plasma and in the work of the universe. The way we build up the space center is with the understanding of the future generation, which is already in their infancy. They have learned to take time, that there is a confinement in space within the structure of the game at hand. We cannot export and put computers games, consoles, I-pads and laptops on every space ship.

2841 K: in the future the generations will learn the dimension of the communication the same way as we have taught and will perceive the same kind of organization in the mental realm. So, as you see there is a lot to be done. We need those who understand control of behavior through peaceful ways. We see this in the younger generation. We see where those who play violent games go. We look for those who set their minds and operate in a different direction. Somebody said we are looking for girlish games; no we are looking for peaceful games of life in space. To be a man in space needs a specific way of thinking and of mental understanding, being serene but open minded to every eventuality in space. In the new space center we teach psychological, emotional pattern of control of the spaceship and of one's own being. As I said, once we set things up, we start working in the direction we should be.

3015 K: But at the same time a lot are catching up. A lot of people are learning and a lot of people are teaching, but we have passed every step of developing different aspects. Now we are learning and teaching governments to go into multi-applications of what is needed here on earth. Beyond it in the building of the spaceship center we teach the behavior, ethos and control of the spaceship system. Those of us who are in their 50s and 60s like me will have a hard time staying still in the confines of the spaceship for decades. We see our new generation, the younger generation, can spend weeks and months behind the console peacefully and reach for a little food and then back on the console. Do something else and then back on the console and not being concerned where they are. You can take them in the deep mind with what they need and they will still be peaceful. You can leave them living in the most luxurious homes and they will be in the chair in the environment they have created for themselves and most

importantly it is peaceful. This is the generation that will be peaceful conditions between man and the universal community.

3156 K: The extension of the development of the space program here in Ghana is a breakthrough for man to understand himself more, and how he will behave in deep space. This will take time but from what I see from the development of the mono plasma reactors that are now being developed is on the position and will be for us to be able to launch every aspect of the technology. Still, we have to deal with the reality of what we are – the governments, with cancer, and everything else.

[The next step for us in every aspect is to convert the work into the single mono plasma](#)

3251 K: **The next step for us in every aspect is to convert the work into the single mono plasma, which means that anything can be done.** This process might take one to two years to convey across the way you learned to make nano materials and how you learned to make gans, dynamic systems and everything else. What we tried to do and it will be done hopefully in the coming time is that all the works of the spaceship institute in Ghana will be continuously live on the internet. Because we don't know how and where we might find something that will be beneficial to man in space or man on this planet. What you will see is the intellectual growth in understanding the process of deep space.

3346 K: let us look at what we are talking about and go deeper into the understanding of how, as the human race, we can condition ourselves into the man of space. One of the problems we have is our own physicality, and the limitation of movement and speed of the movement due to the configuration of the physical body of the man. You have to understand how we can change this, how we can come to control this. Control of the physical structure is the key to the success of man's existence in deep space.

3442 K: those of you who have been busy building ganses and nano materials and the different ganses, it is time for you to start playing and teaching the younger generation how to interact and that they start understanding the position of the strength and the emotion in respect to the change of physicality. Let me explain what this means. A lot of you have built ganses and have made different types of ganses. You have put them in

different boxes, containers and spheres and the rest. In the teaching of 2 years ago we explained in the private teachings how you can use your energy or the energy of the emotion in creating motion. Moving matter from emotion, which is very powerful, but a different strength is very hard.

**3608 K: One of the first things I will like, and this will be done here, is for you to make ganses of ZnO for example. Make different types of ZnO; you all know how to do it. Do it in one container with a normal connection and in another container with a higher voltage. Make 3 or 4 different kinds of ZnO, and put the ZnO in a sphere or a container where you can see different layers of it, preferably use the sphere. Then start using different kinds of emotion in yourself, and see how possibly different layers of the ganses in the sphere will interact and move.** In the past man tried to move the matter and tried to force fields itself. Now the gans of Zinc, especially if you made Zinc not from materials of matter, but from materials of the matters that have already transformed into a gans through amino acid conversion, like the Zinc from different rings, different beings. These are the ones that you will see have a much faster interaction.

3813 K: then try to see if you feel happy, which layer responds. Try to see if you are sad which layer of zinc responds. This way you start learning the interaction between the fields of the emotion and the fields of the gans. This is very much like the first time you go to school and they give you a pen and you draw the first lines. In the future you found drawing straight or in a curvature made a, b, and c. This is the test to learn how to hold the pen of emotion. This way you learn how you don't need to have physical movement in your intention but your emotion creates the physical motion of the ganses or the structure of the ganses. The structure of the body of the man is not made by physicality first; it is made by emotion that the physicality builds around it.

3949 K: so, you do the same; you create the condition of the control of your own emotion and you see if this layer moves when I feel happy, it means it is the strength of the emotion of happiness. Start to build these tools for the others to see. At the beginning it is exciting because now when I feel, it goes and it moves. Then you extend the arm without doing it through emotion and say *I want to reach* and you see how the gans changes the structure of its presentation or the speed of the motion. This is how you start learning what I call emotional control. What I feel, it will respond; this is the key to the operation of zero time communication and decision-making in

space travel. Electronics are too cumbersome and they are not advanced enough. The world of computers today is literally in its infancy and not even 'born' when you understand how you use the emotion for interaction and creation.

4124 K: start understanding how you can put the physical structure around the emotional development. In the future when you learn more you will understand the center of the ball has a soul. Then you work in the future in the coming time through the emotion of the soul, which has zero time across the universe. Those who have developed to this level understand what they have to do. For the human race we start with the holding of the pen and see how we make a straight line or an inclined angled line. This is the way in which we have to go. Some of you are still interested in the shape of the nano material and the structure of the gans. Those of you who have understood and developed, are the people who understand how to control their physicality through the emotion and through the operation of the soul. Where they come in the land of the Aztec (?) or the space of the dimensions of the universe, they create physical structure through the protection of the soul according to the environment. Now you understand the teaching of space. Now you understand how we need to go into the next steps now that we are building the spaceship center.

4311 K: you will not see computerized screens. What happen if you are in space and it breaks? Do we have to come all the way back to earth to get silicon and a design of the chip? Do we have to carry the blueprint of every chip? Or, do we learn through the dimension of the emotion the way you dream and the way your dreams are visual and the way you see, touch, feel and taste become the reality of the operation of the manifestation of the emotion and the soul in the dimension that you can allow people to see your emotion or you can hide it so that nobody sees your dream. In the space center that we build, computers will be in the back rooms where the interaction of the physical structure is created through the emotion of the man.

4414 K: go back through our teachings. Many times I referred to the time that will come that will manifest in front of you the presence of, Blessed is His Name, the Christ. Each one will see him the way you perceive him to be according to your own emotion. And it will be interesting when we put many Christians together and let them play the game on the screen of life of plasma and how each one sees the Blessed Christ through their emotion.

Some will see him as black, some will see him with blue eyes, some will see him as blond, some will see him short, and some will see him a giant. And, then we will see the reality of the collective awareness through the emotion. So, when you come to become the man of space in the Space Institute in Accra you will come to a new dimension of understanding yourself and the operation of your soul better than you ever thought. Computers are too slow.

4533 K: motors are irrelevant and worse than computers. But, if you have created the containment of the emotion within the structure of different strength plasmas you will find the core will take physical structure. This is the future and this is what we have to learn. We have to learn how to adapt ourselves on earth, when we go to the North Pole we wear a heavy coat, boots and everything else. When we go to beach we are happy with the bikini and the brief. In space we cannot carry these clothes and we have to learn through the emotion how to protect the skin of the man from the environment of space. The first step is not to force the condition on the plasma but to understand the interaction of your emotion with the plasma.

4651 K: This is the secret of the man in space, to understand the emotion of the environment and to understand the power of the environment in which you exist and how you want to be in that environment. You enter space like earth. Would you like to live on the surface of it? Would you like to live in the gaseous part of it? Would you like to live within the liquid environment of its ocean or would you like to live within the solid layer of the top as a caveman? Would you like to go into the center and live within the motion of the magma? Or would you like to live in the condition of the plasma within the center of the planet? The best testing ground for man is his own home. You have everything as conditions to test what you might get in space.

4806 K: it is the best incubator, the best research center for man in new generations to have and be equipped so he can go into the acidic world of part of the structure of his planet, or go to the high temperature of the magma in the volcano, or to live on the upper layers where there is a mono structure of certain strength that is detached from the physicality of the part of the planet. So, what you need and what we look into is to build everlasting balls of plasma and then with these create conditions of the structures if need be. Through it we learn that we do not need the physical structure of the ball, but we create balls of plasma through our emotion which creates what we need, at the point of need through our emotion,

because our emotion works very much in interaction with the fields of the universe. So it knows what the condition is and what needs to be done.

4925 K: then you find something very simple; the condition creates a peaceful creature. You are so busy in trying to sustain the beauties of the creation that everything else is irrelevant. Look at the structure of your brain and look at the structure of the physicality of your body. Have you seen your arm and leg and heart kicking each other? The internal structure of the body of the man in cooperation and collaboration with the brain of the man, his soul and emotion is forever busy in containing itself so that it doesn't go out and do damage. You don't see an arm going out and hitting someone and going back in.

[Learn that man in space can last millions of years through the existence of his soul.](#)

5017 K: this is what we have to learn. Learn that man in space can last millions of years through the existence of his soul. If the man is happy with a few decades of life on this planet, man will stay. **We don't expect the whole 7 billion to become the man of space. Very few will join us, very, very few. Those who can go through the transition of understanding the operation of the emotion and can understand the needs of the space to be part of the space itself. *I made man in the image of myself; I am what I am; I am the beginning and I am the end.* This is what man will understand now that we start the true teaching of the operation of the space technology.**

5140 K: **You tested many cores, different speeds, different current flows to create different ganses, and now you understand that all this has been for you to build the trust in the existence of your soul's operation and control in the future of the space technology of the man in space. Nothing more.** Those who are busy with Magravs, stay busy with Magravs. As I said, man will take from this technology according to his own intelligence.

5227 K: So, those of you who work around the work of the plasma, those of you who went a step higher to find the mixture of the soul of the man, and the emotion of the man, and those of you in agriculture who went to find the emotion and the soul of the planet's strength of the fields, now you can build

the Houses of God, which is the sign of the creation if you understood the totality of the knowledge. Those of you who are happy with using plutonium or gold to achieve your status, those of you who go to the essence of the creation, you do not need to divide and decay to go lower, you start from the lower which is the essence and the basis of creation of everything else. So you go down to creation of the plasma, mono plasmatic hydrogen and even further than that...the mono plasma of dynamic systems, with which through the division of different parts you create the structure of the totality.

[The creation of the universe has been one of the secrets of the creation of the man.](#)

5345 K: the creation of the universe has been one of the secrets of the creation of the man. How does it happen? How does it expand to be and how did the unicos start? Everything started from single plasma. The secret of the creation of the universe comes from the unity of itself. But, if you never understood in a very simple picture in book number 3 I have explained it. But, you always looked at it in the matter state. There is a picture in book #3, which is the essence of the explanation of the unity of the creation across the universe. Many of you never understood; nobody has understood how powerful this picture is. This is the only way we could hide the knowledge of the unicos. This is the only way that we could hide the knowledge of the Universe. This is the way that when you come to this point and you see the picture in the book you understand *Oh my God I have the unicos, I have the universe and I have my own structure within it and I was not aware of it!*

5515 K: I have given the full knowledge of the creation of what you call the creator or the origin in Book 3. And it is all in one picture! In this it shows without the talk, the beginning of the beginning—the origin of the creation, the existence of one field leading to the creation of the universe. Search for it; open the book and you shall see. It is in another book in a different way but the same explanation. The origin of life starts with the simplest and then in its transition in the space of creation and in the loss of the strength and interaction of the different strength leads to the creation of new dimensions. But in totality everything is within the beginning. *I am the beginning; I am the end*, because I begin with one and out of myself I create my own division, which leads to the creation of new dimension.

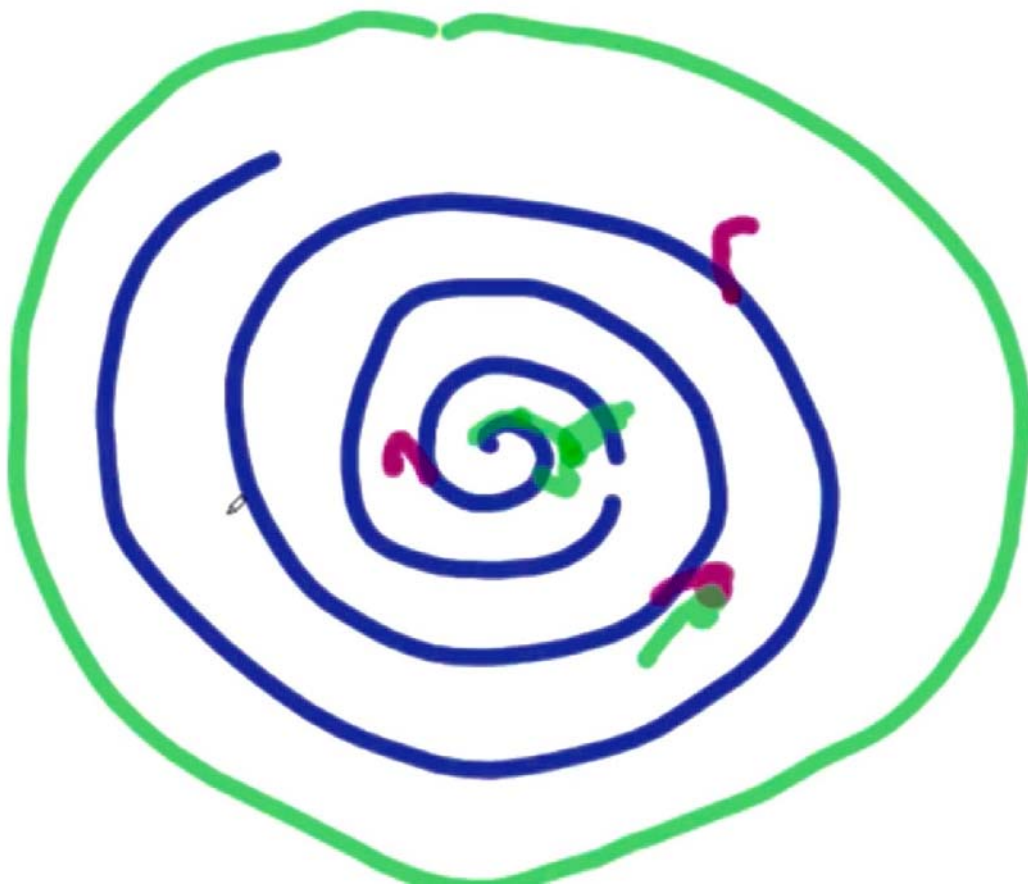

5706 Rick: Mr. Keshe, do you want to use the white board to help explain?

K: I thought you understood, Rick.

Rick: It's for our audience; I am going through the book myself.

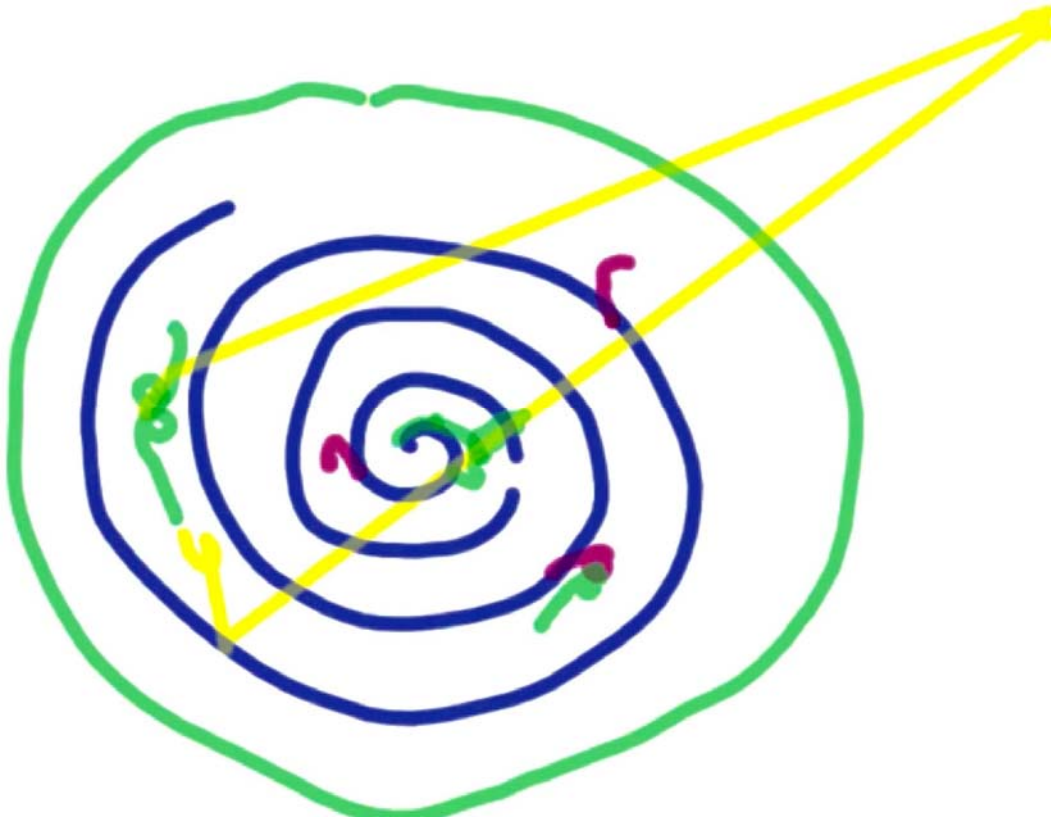

K: let me share.

5740 I will explain to you and you will understand in one go that we have released the secret of creation from the beginning. But nobody was there to see. Go back in one of the pictures and you will see this (a clockwise swirl). And then in the same process you will see this for example. (Red dots added to the swirl; in other places you see this green squiggle). The plasma is the universe. (Green circle encloses the swirl). And as it releases its fields the interaction and the reduction of the fields in space with other fields; this leads to the creation of universes. So the whole unicos is within the structure of one plasma. (58.53 minutes).

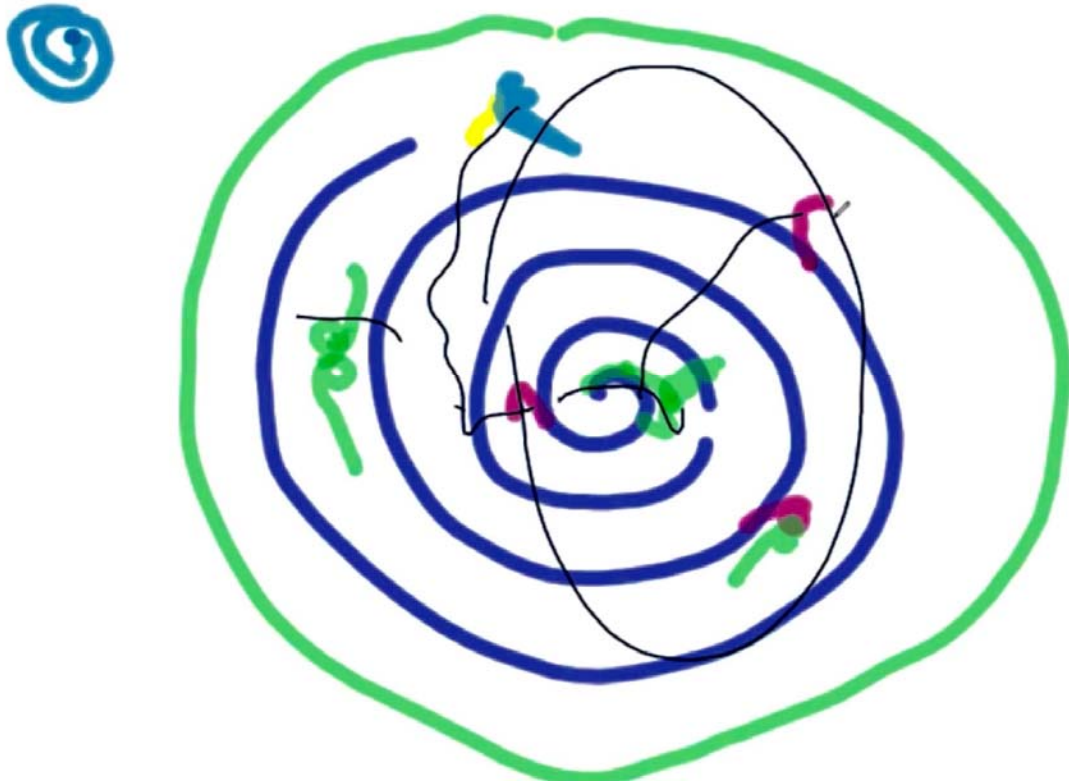

5853 Sometimes you don't need the line of connection. Interaction itself leads to the creation of new conditions (a green line within the swirl). And so in many ways you change everything in different directions (59.12

addition of the yellow lines going out and coming back to the green line with in the swirl).

K: so you don't need to have one line for the interaction of field strength leads to the creation of the new universe. And then again the interaction of the fields inside that universe leads to the creation of galaxies and the same sizes of different field strengths leads to the creation of solar systems, and the planetary soul structure of the man. So now, this explains the unified field theory. We all come from one. This is much cleaner and clearer in the pictures in the book. Now if you understand this, then you understand through the link of your emotion you can connect yourself into any dimension. (1.03 32 minute). Transportation across the unicos from one universe to another is as easy as getting in the car to go shopping to the supermarket once you understand the structure.

10055 K: This is the secret of creation and Accra will teach this for those who understand. Then the question comes *do we need the spaceship?* As I always said you take this knowledge according to your understanding. If you are happy on the back of the donkey you still get from A to B. If you are not afraid and you get into the car you still get from A to B in a shorter time. If you are not afraid you can get a plane. If you are not frightened of flight you still get from A to B according to your intelligence and according to what is available for you to understand the position and the condition. The building of the new space center is the key to the beginning of the opening of the doors into the universal community. Many people will pass the center by walking, with their cars or bikes, and their donkeys. They go for food and they run from one thing to another to be. But within the center we teach the travels of space where now you pass the galaxies, the universes and the rest.

10232 K: The distance between the road and the center is less than 500 meters. Those 500 meters brings the gap between the enlightened and those who are attached to physicality. We need while I am alive to build this center so that we can start the process of the transition from man to space. For man to understand the structure of his emotion, the structure of his soul,

that his soul is the structure copy of the universe and unicorns, it is him who decides his position. And it is him who decides the awareness of his existence across the universe under balanced, peaceful conditions.

[We teach the building of the spaceship in the soul of the man, which has no dimension and no physicality.](#)

10339 K: we will still build the spaceships for those who would still like to have the comfort of touch. But we teach the building of the spaceship in the soul of the man, which has no dimension and no physicality. So now you see how fast we come. The building, the structure is the confinement of the space for man of knowledge to come to. Beyond that there shall be no walls except for man's fear of his own existence across the depth of the universe. If you become wise enough you will understand that there is no dimension. The strength in confidence and the strength in understanding is the key to success in deep space travel across the universes.

10446 K: Man has not got that self-confidence yet. We build the center to start the process. We need to build the center so that we can take the next step. Let's look at something that we discussed before. In the teachings and in some pictures that have been shown in some private teachings, you have seen the video of the woman with the amputated toe where we grow. In some teachings you have seen the woman with no physical part of the brain, but still alive and after 5 years of paralysis she starts walking. You ask yourself why and how can we go without the physical part of the brain and how the woman can walk. We were told if you have a stroke and you take this part of the brain out, then there is nothing and you are paralyzed.

10601 K: How come the person is still alive? How come the person without the physical part of the brain can still walk? You were looking for the physicality of the existence of the brain. You were looking for the use of the emotion strength that leads to the creation of the physical motion. But, the rest is a magic show because you never understood that we used the emotion and the strength of the emotion of the person through his soul to move the physicality when the physical part of the brain does not exist. So, we have already shown this work and now you can relate to it. (1.06.57 minutes).

10701 K: then you understand with the amputation the desire of existence allows the creation of the top. And when the desire dies because what was

not achieved the growth stops. So in both cases we showed the creation of the emotion and in the other we showed the creation of the physicality. This comes from the same brain structure. It is for man to learn. We have a video of a coma patient where we control the motion of the legs and the arms through the neuro system on the jaw without the operation and the need for the brain because we understand through the emotion and the strength of the soul which is still alive within the structure, the physicality needs to show its connection to its emotion.

10814 K: so, all the parts are there. We have seen what you call the evolution of the physicality has been in front of us. This is why some have 3 toes or 5 toes and some animals are happy without any toes and connect them all together because they need the strength. It is the emotion that has decided the shape, the size, the presentation, and the manifestation of the shape of the end of the physical existence in respect to its environment. 5 nails, or one nail to become a horse or a donkey as a hoof, or I decide to have what I want in a different shape but flexible so I become the fin of the fish.

10927 K: in the spaceship center we teach the tools of space according to the structure of the space and not according to the understanding of the man that it has to be a finger and a toe. You decide in the emotion of the strength of the condition that you don't need 5 fingers. But you have to understand the condition of the atmosphere of this planet enforces such a condition for the man who wants to be in that shape. You have to receive and give energy through the balance of the tip of your fingers and through the length of your fingers and toes to the shape of the toes. This manifests the emotion and the existence of the behavior of the man. Man has never understood this.

11033 K: You can try to have 20 toes and 50 fingers and you will find out that doesn't happen because the environmental condition of this planet according to its structure of the division of multi materials plasma enforces this construction and you have no choice. And this is for man to understand. When I change the atmospheric condition of the planet that allows and has a need for 10 fingers and 20 toes you will receive it because this is the understanding of the comfort of the existence in that position in the way you want to manifest yourself. Then you can ask yourself a single question: *if I am a woman can I make myself into a mermaid? Then I could be the queen of the oceans and the beauty of the land. Can I create birth without the need*

*for a male? Can I be a man that I can sleep without the bother of the physicality? Now man is given that chance.*

11216 K: the structure of half man and half different animals was given to man for man to understand the mixture of his existence if he wishes so. But man took it into a different dimension. When you understand the work of the plasma in the shape we explain you can live within the oceans and seconds later you can live within the structure of the solid body of the planet. It is you who decides the conformation of the existence because this is how it needs to be in that space and field strength. This is how you get different shapes and colors and structures of the same animal in different parts of this planet. It is for man to become intelligent to the knowledge. (113.09 minutes)

11313 K: it is important for us to teach the way; we have brought all the ingredients for making man the man of space. Now we have to show him how to mix it and how to stir it and how to position it to get ‘bread out of the flour’ or ‘cake out of the same.’ It is you who mixes the dough. It is your emotion that dictates the manifestation of the physicality. Now you understand what we taught in Accra. We are gathering huge support for the next move. We are gathering the intellectuals to make the ground ready for the next generation as the next generation is not matured enough to be able to understand the way they are set up.

[When you look at the gans in your containers think how much of my emotion does this gans understand?](#)

11448 K: Now next time when you look at the gans in your containers think *how much of my emotion does this gans understand? How much of my anxiety has been shared with it? How much have I brought for it to be in peaceful conditions?* How you make the gans and the nano coating is not wrong. But the core you use—all this was to bring to a further point, a further step in the knowledge of the understanding of the universe through the operation of the soul of the man. If we would have taught this 3 years ago they would have said *the guy is a lunatic*. But now we are all lunatics because we made the ganses and we saw them moving and we saw the interaction with our emotion when we took Zinc or Copper or whatever. Now it is for us to understand the strength we need and what we need to create the condition. But using our own soul!

11638 K: The problem is not the knowledge, the problem is accepting and understanding the truth. The problem is for the man to understand his own emotion and his own strength. In fact there is not a problem. It is the comprehension of the status of one's emotion and soul. There is expectation in the physicality when we have been given the level of the soul when in fact the soul cannot support. I love to be famous or an actress, but in fact I don't have the figure and I have never been trained to be one so how do you expect to be one? This is the question: to be able to be the man of space in the condition of understanding the universal condition it is for man to learn to elevate the status of his own soul. Do I need to have a physical interaction to have a child or can I have a child of the soul of the creation without physical contact?

11818 K: Do I need to have the physical body to love or do I love the soul that creates the physical body and now the body can be any kind of shape you want to be as I created the line of interaction and motion? It is very hard for a lot of people and scientists to understand. But, when they do understand they understand there is no need for physicality to create the interaction of the creation.

11906 K: let me put this to you in a very simple way that maybe you will understand. Does a neutron have intercourse to give life to a child as what we call the electron of itself? No it does not. So is there a need for existence of two to create the silver link or understanding that division of the strength can lead if the condition inside of what we call gravitational magnetical balances itself in respect to its environment? So now we understand. I can love and create unconditionally according to the environment of the existence. So, in so many ways we are back to square one. What you see on the screen – a lot of you have been looking for unified field theory. It is unified. It comes out of giving and in giving creating different strengths so that the ones that are outside are turning inwardly to match up with what is matching to create the new dimension. This leads to the creation of gravitational force.

12114 K: the creation of yin and yang, the creation of magnetical and gravitational comes from the creation of the motion of giving so the interaction of the environment of the fields creates the fields of the gravitation. This is the key to secret of the creation. If you understood what I just said you can manage and create anything you need at any strength

anywhere in the universe. If you have moved and you have a division here because of the strength that is not the same and then you have another which has come from the field of the strength of the inner but of the same, the two will interact. In interaction any other of the fields which are of the strength will come to be of the same and now you have created gravitational pull where in fact the field still grows to give more. So gravitation comes out of magnetical and out of the residue of the interaction of the fields in the environment which are of the same strength, and this it pulls all the fragments together that you have created and gravity comes to be created out of giving.

### [The more you give the more you receive](#)

12303 K: this is what I say: *the more you give the more you receive* because in receiving now that you have created multi layers of field forces there is always different dimensional strength available and present which you can attract. Does the existence of the man become a coincidence of the interaction of the fields of the universe? Or was it by intention of one to create one? The former is much closer to the reality. The understanding of the creation is the secret to man's passage into the universe. Because once you understand this, your emotion cannot be abused and you don't need to keep on building different houses of worship with different names in different parts of the universe. As you come to different point of understanding, which is above you, and you don't understand, you create the church of this and the mosque of that and the temple of this in different parts of the universe, as we become multi-cultured religious organizations.

12452 K: Now we have become unified religions, we see unification of the religions, and this means the understanding of the creation to be one. It is us, according to our intelligence that make and build different churches, temples. Now that you understand the way it works, the temple of the God is the temple of the creation. So, where do we go from this point? I will teach in the spaceship center the next step of the interaction of the man with his own soul through the mirror image of the systems that the man will make himself, and then through it the creation of the spaceship of the unity of the body of the man and his soul. You will see people who make the spaceships and we will see people who understand more make a spaceship out of their own interaction of the physical dimensions of the strength of their soul. Then you will become of those who have been enlightened.

12615 K: the rest will be busy with nano coating and making coils, health units and flight units. We cannot raise the intelligence of all these 7 billion in one go. And those who take into the direction of space are those who will survive the upcoming what is to come. Because even if you start building the space ship and understand it you still need years and years to be able to control it and fly it where if you make the desire to use the restroom to get up and go or if you want some water you get up and get some water. Now your desire is for a position in the universe where the explosion of the fields of the interaction of two solar systems is too far away. And then you carry the flood of the human race into deep space even though the home is gone.

12721 K: I complete the building of the spaceship center in the coming months. We put the first bricks down in the coming week or two. Then it is for you as the human race to participate in the speed of its development. I have done what I came here for and these are the last moves before I depart. It is for you to understand the knowledge and build on it. It is for you to be able to comprehend the truth about the world of the creation and not the way you like to push it. Somebody put a word there and they were too busy. Somebody put an image there and all these we leave in the hand of the man. We keep the man busy according to his own work.

12829 K: Try to build mono plasmatic system and try in the stage of the development to build the mono plasma of the ganses of your emotion. And then instead of moving the core try to interact in a peaceful manner with different strength of the same and see how you can shape it. Then you know how you can shape your physical body in different dimensions. Then try to see how your emotion will show itself in the manifestation of the shape of the certain layers of the plasma. It will be nice when you find out that this gans is for my happiness, this gans strength is for my sadness, and this gans is for the expression of the joy of being with a partner. And watch them and see which one is changing the speed and shape according to how you change your emotions.

12956 K: Then you understand the control system of your emotion and then you create a condition where again the ganses are irrelevant and you see the field flow. Then you touch the control through your soul where the physicality of the existence of the fields of the emotion come down the line. Then you can control at the end in what way the physicality manifests itself—the nail, the skin, the hair, the eyelashes. This is what I said many

times and maybe you understand more: *it is the creation of the interaction of the fields of the plasmas which leads to creation of the soul, and once the soul of the man is created within the womb of the mother, the size and shape of the physicality is done according to what it feels in the womb of the mother in respect to the mother, the father, the environment and the total balance of the souls which are interacting with this position.* This is not what is written in the books of science of today.

13116 K: But now you understand the truth about how and why we have two kidneys, one liver and so forth. It is because when the soul of the man is created in the structure, which is long before it is embedded in the soul of the sperm and the egg. Remember, you put an orange and you got the taste of orange in the water. The shape of the existence of the kidneys, the liver and everything else is the same way. You call it DNA or RNA but in fact it is the replication within the liquid of the womb of the mother that is the same as the replication of the cup with the orange.

13215 K: now you are wondering why we come up with the same thing. Because we mimic the process, now we understand. And in the cup you can have all the tastes and all the parts. Our dearest friend Alekz has shown this in the same cup with banana, orange and alcohol. In the morning he felt the orange and in the afternoon he had the banana and at night he was drunk for two days. But it was the same water. This is why when you get the rain suddenly out of nowhere you have the replication of the fish. Where was the fish? How did the fish get into this water? We didn't have the fisherman to get the fish from the ocean and drop it in. We find out the original fishes are the same because the condition of the replication of the water in respect to the environment seeds the copy of the replication of the emotion of the planet, which has the existence of the fish? Now you understand how we replicate.

13342 K: once a pattern is set you become part of the plasma, if you create the repetition of the same environment you will get the same thing. It is a mass production machine of the entities of what we call the womb of the creator, be it the dog, the man or whatsoever. In space you decide the shape so now it is the environment that has given you the dimensions. I have no calcium here but I have plenty of potassium, a lot of arsenic, and much more carbon. So now in this environment according to your soul you need an environment that can live with arsenic, a lot of carbon and whatever. Then

you manifest yourself to exist in that environment. This is what we will teach here (in Accra).

13448 K: go back to part of the teachings. If you remember I explained one day that I would make a box of the universe. In the conference in Einhoven I opened the box and I said *this is the empty box of the universe*. Do you remember? Now I can create conditions in that box that shows you in the condition of the environment of the universe in that condition how you will physically look. It is the empty box of the universe, but full of the physical condition of the field forces of the plasma of the universe. It is an oven. You give it 250 to 300 and it bakes something different. You put it at 100 and you can braise with it, or you put the heat on the top and you fry it faster and all the rest.

13600 K: now we make the plasma of the universe in the box and you can understand how you feel and look if you decide to put your soul in that box. Then you understand what I said: *I will bring you to see the soul of Christ*. Because in what you understand from that will give you the manifestation of the presentation of the reality according to your understanding. So, the incubators of the universe will be part of the structure of the new space center. In a very simple way you have all seen this and you cannot connect to it because it didn't make sense because you were looking at something else. Dr. Klaus, Dr. Rodrigo and the rest of the medical team have been building this box for you but you always connected it with your life and with the physicality and the shortcoming of the physical life.

13711K: you already have a pre run to the box of the universe. If I put the dynamic plasma that is connected to you in different corners of the box and I create the condition of the fields from the other sides you will see how you look in the space of planet Zeus, because the environment has been created in the box and your soul is part of the interaction. You will see if you have 20 arms and if the temperature is good and in a way you pre-test the space suit of your life and your physicality before you go into flight. *Would I like to be Rex? or how would I look if I have 20 arms and 15 legs?* Now you understand why we are opening the space center. You will not see what you would have and you have been seeing, but we will teach you and the next generation to live and be able to understand the process of the strength of their emotion and the interaction within their soul that it leads to their manifestation. Then you want to read the mind of everybody else because through the soul you can interact with them and they tell you *no, you need*

*two legs more.* We all want to be and you will manifest yourself the way they want to see you and not in reality the way you are inside.

13847 K: we have seen many men of space on this planet. Outside they look as a man but inside they live the existence of the soul of other dimensions where they originated in the strength of the gravitational magnetic field. Now you know how you see so many passengers of the universe on this planet. To them inside they don't see themselves with 2 arms and 2 legs. The others of the same (origin) they recognize but those of you as humans who would like to see people have 2 legs and 2 arms, they look the same to you and you see them that way.

13930 K: and then because they are not aware of the restrictions of the physicalities in certain dimensions you see them and they go through the walls, they walk, and you see the spaceship and everything else. Now that the man has managed to bring the equipment and develop the technologies that they can record different strength and dimensions, we see as magic. But in fact to the being inside he does not see himself as a human. He still has the feeling and emotion of his origin. But to the eye and the existence of the physicality of this planet he manifests himself in the shape of the man. As we say the beauty is in the eye of the beholder. You see the ugliest creature but to another it is the most beautiful thing God ever created.

14046 K: how many times have you watched the television and you see the two matches and they don't fit and they say they are so much in love or whatever, and you go blurghhhh. Or you say they are so fantastic and the man has no feeling and you say, *what a stupid man*. It is because how they perceive the interaction of the soul, be it the man or be it the woman or the dog, cat or whatever. This is the process that you will face in space and the new space center does not need to be multi story because on the field strength of the planet we can create all dimensions.

14128 K: Now you understand why and how we have come to Accra. Join us, those of you who are true men of space and not here to prove that you can make different ganses, but you have come close enough to your emotion and soul that through the interaction with the ganses you will react and create the condition of existence. Now which one of you is the true man of space? and which one of you would like to go with the aircraft, the space ship or the sheep of the body of the soul of the man? Many times you said that we are the same flesh and blood. Now extend the knowledge. In the

universe we are all the same soul and we came from the same. The manifestation of the existence in the environment allows us different presentations. So the souls are all the same within the structure of the creation. It is the environment that gives them different manifestation and physical dimension. Any questions?

### [A question about donating money](#)

14309 Azar: good morning Mr. Keshe. If you don't mind I have a few questions.

K: one or two...?

Azar: 3 questions. The first question is regarding the money we need for the space ship that you are building in Accra. I was thinking that many Keshe members are selling stuff like soap, patches so is there any way we can create a bank account and make a direct deposit between the bank the foundation so that 50% of what comes in goes directly?

14425 K: let me explain; we have set up a central banking system in Holland for KF that we have had for years. Anybody can donate to it in any shape or form and we never ask or tell how much. We set up criteria for the partnership with the manufacturing and people can do whatever they like. The banking account is on the net. The KF USA has its own Paypal so donations can be made that go back to the KF. You just put it as a donation and it goes to the head office in Holland and we have set up the KF bank account in Accra for KF, but that is in partnership with the Ghanaian government. You can do it in any shape or form; we do not ask.

14526 K: But this development for humanity incurs the physical cost of building it. We never ask you for KF and only for the fixed donation for the cancer treatment and research because it has to be covered and it is something that we do. The rest of how you want to donate is up to you. This was discussed just before the teaching today in the background and the discussion has been ongoing for some time. A lot of people are making a lot of money with teaching, seminars, conferences, Magrav parts and once they collect the money they forget about everything else. We bless them. They need the money and otherwise they wouldn't do it. But on the other hand if anyone wants to do anything to support the development, remember we cannot go to governments because then we get conditions. We support it as part of the KF worldwide.

14633 K: this is the change that I have called for management in KF. You decide; the cost we see is about \$250 million or 250 million euros. It is the latest condition to create what is needed. I wanted to create this with the Chinese government some time ago but they played a different game. Here in Ghana we don't need to play game; we have received the support and we do it. We need to raise around \$250 million to build the space center, healing center, the UC building, and the World Council (WC) meeting center that will be here and everything that goes with research and development. We were talking with the scientists of the different organizations over lunch for the past several days. They said they we need to build totally new systems to be able to measure the strength of the plasma. I said to them that at the table that 100 years ago we didn't know about X-rays and gamma rays. When we discovered what we can do with them, we set out to build systems for detection and measurement and everything else.

14756 K: now we know about plasma and the way we explain it and now we have to go through the same process to build systems and tools of measurement and build tools so that we know what is and how it should be. These all incur for people to be able to do and live to be able to participate. So, whatever they like, there is one thing we need to do. Those of you who are looking for peace, free energy or whatever, this center will become one of the centers. On the back of this other centers will be built. We don't go to put and get membership. It will all be done by you.

14843 K: We need the \$250 million that we estimate to build the space lab for humanity for whatever conditions there are. So don't come back and ask if we can pay \$50. The accounts are there and USA KF has a Paypal account. KF in Holland sits on a bank account and you can donate in any shape or form. Now we are in the stage that we need to do it and have to do this. The speed of development is not a church where we are building a new temple. This is the temple of science, peace and going to space. Those of you who want to do this, it is there to be done. We never go out to do things that cannot be done and we always left that for those who can do it.

14937 Azar: Mr. Keshe I understand and for me there was a part that anytime I wanted to send money because I was buying things I had to spend \$100 to the bank of the fee charges to send the money. Paypal will make it easier.

K: KFUSA is an American corporation on the back of KF. Put the donation there and then that money will be transferred to KF headquarters. Then according to what we need to be done, it will be sent across to different parts of KF to support the development of the space center. Most of our expenses come from the equipment and the development and acquisitions on the edge of science technology so that we can go into the next step to become without equipment.

15039 K: we talk about that there is not one single gram spectroscopy machine in Ghana and we need 4 or 5 of them. They are \$150,000 each. Where does that come from? Without spectroscopy and without infrared spectroscopy and a lot of other machinery that is in the hands of organizations like NASA and the Space Institute it is impossible to do. On top of this we have to development new, more advanced systems that work in the field of plasma. I made the request to NASA 3 to 4 weeks ago because we have a direct contact, if we could use their field detectors that can do 360 and they said there is a sanction on me by NASA. But, there could be another organization that might be interested in participating in collaborating. They have the machine.

15140 K: these machines are \$1-2 million each where we can 'field detect' and build the space ship. The top core members of KF and I in the past few weeks and months have taken a lot to see this come through. But it has come to a point where there is a need for international members to support it to be built. We don't have the money and we come to the breakdown. We support it as much as can be done.

15218 Azar: for me I had situations like this past Monday and a gentleman called for information. He came to the office with questions about the Magrav. After talking for an hour with this very nice gentleman he just opened his wallet and gave me \$50. I told him I had not done anything and for him to just keep his money. Knowing this it makes me feel good to collect that \$50 so I can send \$25 to KF. So far I think everyone can do the same thing.

15255 K: Thank you very much Azar, it just depends on your emotions. I know people are giving conferences in Germany and Spain and are collecting \$10,000 to \$20,000 in one session without doing anything. They are using the name of KF for themselves. Have they contributed anything to the KF? No; they use our name, so be it. Last week Rick showed something

that people can put the maps of their presentations and conferences on a map. Do any of them send a single cent to the KF? Hardly any. A lot of people are earning money for themselves. We see where they go; we see one after another of them collapsing.

15344 Azar: you know they have to deal with their own soul.

K: that is what I said and now we leave it to you. The building of the spaceship center incurs costs as well as bringing scientists who can use it and develop it and that's on you. We put cameras and if you see no development then it means that no money has arrived. That is how it is going to be. We have shareholding in a number of the companies and we are taking over some of the factories for 100% control now because we had to. And, we will see. A lot of people come to us and then they do different things, we leave it to them. I am not attached to it; we have seen a lot of scammers coming up in every shape or form but we carry on.

15438 K: There is something I have to tell you. You notice that we don't refer to DL this week. The process has moved on into the hands of the members of law enforcement and has gone into massive movement. We have been told by prosecutors not to mention anything else in the teachings as it could damage the case. There are prosecutors in four different countries. We have found a lot of information and these are the people who have been 'milking' and living around the KF and making all sorts of accusations. We have opened the first step and this is costing us money and the people behind it understand.

15543 K: we have set up the first steps of what we call an Interpol organization collaboration of all the forces and agencies with a central database like a 'police' wikipedia. The structure and system is set up and costs money. Now we are asking the security forces and police to come in and add to and take from the data. I was told that at the moment this 'police' wikipedia has about 11,000 pages. So these all cost money and it's not just the creation of the world government. We are setting up the security system behind it for those who do whatever they do. We need to have these various forces to become one. At the moment the FBI, Dutch and Italian Police, Belgian and Austrian prosecutors are all coming in and looking in at how this is working—who is working where, how it is done, what criminality is involved and the accounts that were opened by those they are investigating up to 25 or 30 years ago. They have been siphoning off these accounts with

child trafficking and money laundering. They call themselves innocent but all this information is in the 'police' wikipedia that has been set up.

15705 K: we don't leave this open to the public but we are setting the basis for world government and this takes times. Hopefully very soon we might have a Norwegian policewoman who might come in to be part of the structure. We are asking police officers in different ways to come in to the structure and this all costs money. We don't talk about this; this has taken 2 to 3 years to gather 11,000 pages of information. Now when we speak to law enforcement such as one I spoke to last night, I said that we had given them the information, so be kind enough when you receive information to put it back in so the other law enforcement can use it. At the beginning there was hesitation but now they are using it. We had done this with the Italian security services and police since Fabio's death. They have direct access to this what we call 'wikipedia' as does the FBI.

15820 K: all this costs money and we pay for it; people think it is nothing, but in time it will come. You donate what you can. We know people in Germany are making a lot of presentations and Magrav systems and the KF has not seen a single cent. Have we called them in to ask what they are doing? No, because at the end they are the losers. It has to be correctly done. We are moving the factory in Italy to another location, as there are delays in deliveries and other problems. Now the KF takes 100% control of it and we apologize for any delays in deliveries. We were facing this for months and now we have resolved it and in the next few weeks KF will be in a new position in the southern part of Italy. Then everything is in the hands of the KF with 100% control and everything goes back to normal.

15916 K: we know our problems and we don't hide them. Everything costs money and we have to pay. We don't receive donations from people or organizations. We were sent a very large donation and the American government blocked it. That's their problem! Donate what you think is right. Building the center is KF worldwide and our responsibility. It has one advantage that the factory is running. Once the factory is running then it will contribute to KF. I can only take from it what my share is for KF. The Ghanaian will not pass over. They share in the profits because this is part of their national income and they will not pass over the taxation. We have to pay the taxes to the government. On top of that the government takes another 25% of the shareholding so that means we pay 50% to the

government. The other 50% is spent on KF development and will be open to us.

20034 K: But, until then the licensing and all has to be done; this will not grow out of the ground. 250 million Euro is what we have to raise. \$1 to \$1000 a month all depends on you. Now the KF USA has Paypal and is open for the ordering of American goods. That means that nobody can accuse the KF that they are doing 'this or that.' So, you choose. In the coming time we will release more information about the development. We have put cameras across the fields in Ghana. If you don't see any development it means that humanity is not ready for it. I take from the KF what I need. I have no Panama hidden accounts, I have no bank accounts, if I buy something I pay from the KF. If I sell a book it goes to the KF. Those who are close to us know this. We have never been so transparent. You may me cash it goes to the KF. I have no attachment.

20150 K: if you don't see development as the cameras are showing the site, it shows what is going on. If you want to donate to certain sections of the KF, that is your prerogative. From now on you wanted world peace and we established the world government and the Universal Council (UC) and we have established factories to support. We have received help from the government to build the first space center and we can build the first hospital. From now on KF worldwide decides and it doesn't matter if you are in China, US, or Brazil. There is one bank account number and one Paypal account. Armen is in charge of the US accounts and we trust him with our lives. I have access to the same bank and it has been set up because of the collaboration in the USA. Every KF manufacturing has its own bank account and they operate as an entity. Any profits from us go back to Holland to the bank account, and then it gets distributed across to the KF projects world wide.

20306 K: the work in Japan is colossal and we entered the 3<sup>rd</sup> phase of the testing in the next 72 hours. The Japanese scientists are baffled at what is coming out. What is going to be our position with the Japanese government in respect to our research? It means a lot of investments in the companies that are spun off and the manufacturing. I have supported the KF for the past 20 years in every shape and form. Man wants world peace, the UC, the world government and to walk away from the shackles of what I call the 'color/race UN' where the only decisions are made by the white man, and

only the English speaking. If you don't go along with their decisions they bomb you and you are finished.

20400 K: You want equality and peace it has to come to a universal language, a unity across the world. You want the direction of the peace for world government you need men who understand world government and then you have a beautiful WC. We are setting up the intelligence areas in data collection in what, how, and who is doing what across the KF. Two KF are getting set up. As I said there is about 11,000 pages of data that have been collected, let alone our data collection on individuals that have come across the Kf which is another bunch of data. If you want to contribute the KF in Holland account stays the same or you can do one on Paypal. We will see that it comes in as a donation and we will transfer where it has to go.

20504 Rick: there is a question about moral acceptability for donating to KF. If I take back through the legal system, the earning they stole from their toxic money schemes, is this morally acceptable to put this into use for our goals?

K: that is your decision. KF is a registered charity and you can donate to a registered charity. It is a non-profit organization.

20547 Rick: Some people are worried about where the money might come from such as if it was obtained from some nefarious means.

K: what do you mean? For the foundation or for them?

Rick: well for example there might be money coming to people that is coming back from people who have been stealing money for years.

K: we cannot check these things. We ask you please if you have dishonest money to keep it to yourself. Donate it to mafias or another organization. We want money that is not and cannot be tainted. We don't want to rob Paul to pay Peter. We have seen the situation in Italy where the newspaper guy attacked and caused a lot of problems with the civil defense people by writing rubbish. Then we saw a bunch of idiots immediately jumping on that bandwagon right away. Now we have submitted our letter according to Italian law and the newspaper stands for massive damages to the KF for slander and damaging the credibility of the KF. How much it will be, goes back to the pocket of the Amero Bank. Is the money legal and correct? The money goes to the KF and I don't take it; it is handled by Giovanni and we are monitoring it.

20731 K: we have people who have offered us land and everything if we let them have a power generator. I can do that immediately, but on the other hand everything has conditions. We are going to the position now and the KF spaceship Ghana sets the conditions. It is the center where we build with the correct conduct. Why do need and why shouldn't we have a world center in Africa? Man started in Africa. So are we going back to our roots? Is it time that the suffering on this planet shows us that all will learn from it, and bring peace to the planet? I don't know, but it looks like it. I have found a lot peace as well as a lot of hardship here. Things are not the way we are used to but maybe we have to change our expectations.

20836 K: I enjoy immensely working in Africa and have done so for years. And to me I see a lot of restrictions in what I am used to. But I look at the target date and it is worth the sacrifice. But I can do this; others can teach and Azar can sit for ½ and hour to an hour to listen to it. You tell them that you are put at the front of the KF. We need to raise this money if you are there to make a change. Once we put the UC and the WC as well as the spaceship institute, they are all there. You ask why all in one place? When you are dealing with the man of space and you have a center where you can talk to them, they will land in your center immediately into administration and into the governance. You don't need to have them land in Accra and then ship them somewhere else.

[The combined Spaceship Center, World Council and Universal Council Center is where we negotiate for Universal Peace.](#)

20943 K: There is a reason I put the WC, the UC and the spaceship center next to each other. This is where we negotiate for universal peace, and for the universal community, all in the same place. It is in the peaceful land of Accra, Ghana. We don't need to go to the airport to get permission to be delivered from the airport to the UN building and problems with a local government. We had this problem with Ahmadinejad in Tehran when there was a UN conference. Americans call it the UN but they dictate which diplomats can come in and who the terrorists are. Who said we are terrorists? Half of the Israeli cabinet were terrorists and they were forever sitting in the UN. Where is the ban for them?

21045 K: this way this doesn't happen. You land and you are in the council. You land and you meet with the leaders and people who decide. We saw

how abuses come under the flag. Why do you think we brought the UN down to what we call the UC? British-speaking and English-speaking colonies carry 60% of the voice in the UN so Britain and America get whatever they want. Bribery, push or whatever is used. Colonialism. With the French element they control what they want to put through the UN every time. This way there is one language and not the nations. I know what I have done and it needs to be structured and set. This building, this structure in Accra has to be built and developed. It is the key to the unification of man and the key to bringing man to peace, and the key to the interaction of man with the universal community.

21203 K: we see the mayhem in European Union—one office in Brussels they ship for one or two months a year all the way to France. Salzburg ...why? Because the French never believed that Brussels would be the center of the EU. They are waiting for the Belgian monarchy to collapse and have the alternative ready. Have you ever understood why Salzburg is there for whenever they want to use it? They continuously come and go. Everyone knows the problem of the Belgian monarchy with the pedophiles, child trafficking and all sorts of problems. They know it's going to collapse. The French King created Belgium for his son. They will not let it go.

21305 K: Now you don't have that problem in the UC; it's all in one center. We wish it and we receive it. Benjamin is shocked at the things I do here. I plan, I wish and I receive. We need to build the world center and the world government. The 6 members of the world government don't need to be there. But the center is there when they need to meet with the world government. The UC will not meet in Rome, but they will meet in Accra and people will come to achieve peace through any kind of negotiation for humanity. It is not that once we establish the WC there will be peace everywhere. It's a family; the human race is big. They will fight a little here and a little there and they will come into the environment of the UC and they will find solutions and peace with themselves.

21417 K: you will see in the next few weeks that we will have cameras on the site. Benjamin and I have been on it. Now we have to plan how this is going to be done in a way that it is safe for everyone and reachable by everyone. And then the rest is yours. We estimate what we need and you've been crying and calling us everything. It doesn't matter. This building has to be built on this site. The UC, the WC and the spaceship institute have to be next to each other so that they can meet the future needs and demands of

the man. The country chosen is safe from all sorts of things. It is in the womb of Africa in the hands of people who are peaceful and so we do this for you. This is it and the camera will be on as we did in Sosano. If there is no movement don't blame us. We are not building a church or a mosque. We are building a center of excellence for humanity in science and we are building a center for the negotiation of peace. The UN will go to war with each other but the UC will call the same government where they work on peace.

21550 K: through the work of the UC and the correctness of the WC you will find there will no conflict with the UN and the world leaders. Gradually they will come to understand how they can achieve peace in this building in Ghana while they still plan wars in the building in New York. This is what the plan is and you have seen it. America pushed for war between the Philippines and China. I advised the Chinese and I supported the Philippines KF. We didn't write to people and governments. The intention was there in the soul and we achieved it. You saw how one of the biggest war plans by the Americans was walked away from that would have been like Viet Nam and worse.

21644 K: this is what has to be done and this is where the UC calls the nations in and they sit down and they talk. And they find a solution. We don't have to demolish the UN; it will come down on its own. From the top floor to the bottom it has nothing but rivers of blood running through of millions. We saw Libya, Syria and Iraq where there were false accusations of chemical warfare and there were no weapons and such and they knew that. We replace very rapidly in the next few years with the UC as the men of peace who support. If there are issues between two nations we support both of you and then you are both at peace. We don't incite war but we find a position where both are happy. The UN building will burn down very soon and it will come down with nobody in it. People will be ashamed to say they used to work for the UN.

21806 K: so this is the way we do it. We will put cameras and you will see land with grass on it; it is yours. If you see buildings on it, that is yours. I will not go hungry. Members of KF have worked in the past few months to see that this is happening and they have to be looked after correctly. And, it is there. You will see everything that is without limitation and our finances will go to that. We have to spend a lot of money this year on the research to do what we have achieved. It is you and what you do. Those who give all

these teachings and it all goes to your bank accounts...good luck to you. We never came with a summons because you were using our name. I said to use the name and the logo because the more you teach the more knowledge will come. The knowledge that comes from people, the more peace that comes from them.

21919 [Azar: the second question goes back to the ZnO gans. If I have 7 or 8 ZnO gans do I put them all in one sphere and see how my emotion is?](#)

K: try it. Find which one fits each emotion. Have you found the emotion of love in you with your zinc? Put these zincs on different containers away from each other and see when you feel lovely and you want to love your partner. Then that is your 'love zinc.' And then get angry with your child or dog. Notice when you got angry and that is the 'anger' zinc. Or if you want to stack it you can put love on the top and anger on the bottom or reverse them. Don't intend; see the reaction. Maybe your emotion sits in the copper end of zinc and you made the wrong 'emotion zinc' because you said the zinc doesn't work. You haven't understood it.

22020 K: what if you go to the dimensions of the soul of the man and the gans that reach the soul? Then you see that feeling if the soul moves that way that is the gans. Why do you deal with the emotion of the zinc? You can go directly to the level of the soul. And then you see when you reach that and see which of the gans move and then put copper and zinc and see which one moves. Then you see the connection between the physicality and the emotion and the soul.

22053 K: get two gans in a bottle. I said this before. Use copper and zinc and put them next to each other to see the balance. Then move one to another and mark it and see how they move. They interact. Maybe Azar you can work directly with your soul instead of with your zinc.

A: Actually what has happened, Mr Keshe, I was going to ask you this question... Have there been any changes in the environment of our planet? I ask because for the past few months every day (different) emotion comes up for me. This is such a big difference. One day on a Sunday I can tell you I was like a wild horse that needed taming. I felt uncomfortable in my own skin. I had to stay in the house because it was so uncomfortable to be in the body. But then last night I came after a whole day of work and I felt so good in the body like I was in heaven. I don't understand because there is such a drastic emotional difference.

22200 K: let me explain why. You are across and you work a lot with ganses, so subconsciously through your emotion or your soul you transfer a lot of energy in and out. The minute you come in to the environment what is lacking is there. In a way you live in a capsule of plasma fields that we never had before. We always doubted the matter state plasma. Now you find a lot of people who work with plasma changing in their behavior. A lot of people who never made a single gans in their lives, and DL is one of them who never made a single gans because he is a robber. So, he accuses everyone because he has never been touched with the beauty of the ganses. Most of the people who oppose and come after us never made anything and they have to confirm their existence. Once they start making the ganses they see the beauty of the creation and they have no opposition to it. They see that they control their own destiny. It affects you.

22314 K: we see this in the factory where we are carrying thousands of liters of gans. When I go in I feel how the people have changed. I met them two months ago for the first time and I feel how they have changed. Their prospective and views change gradually because their emotional side is satisfied. It is a very strange position. You transfer your emotion without you knowing it. People who don't feel comfortable in physicality, look into the gans of what you have around you... it is taking too much. Move the gans around. Never collect gans in one pile. You create a physical dimension. I have seen this when people put everything in a tray because they want it all there. This is wrong. You have given it a physicality, and that physicality has to handle everything. Move your gans. Put a bottle of zinc gans somewhere else in another part of the room. Put the copper somewhere else. And then as you go around you interact with them.

22440 K: High link up of these gans is going to be a huge problem for people. In a way you made a physical structure but in the field of the plasma. You have your 3<sup>rd</sup> question, thank you very much for your work Azar.

[How can an emotion be so strong or strengthen that it leads to instant results?](#)

22506 Rick: There are questions related to the idea of space together with the UC. How can an emotion be so strong or strengthen that it leads to instant results?

K: it is intention.

Rick: I know you mentioned earlier how they were surprised in Ghana how you got things going so quickly and had things happen so quickly. That is related to this question.

22553 K: The thing is we came here with the intention to serve the nation. When we left Italy we didn't come with one suitcase. Carolina and I decided we were going to Ghana to change. We came here to stay if the ground was there for us to stay. When we escaped from Belgium for Italy we went with 3 suitcases before the assassins of DL came; they battered in the door when Carolina was there. When we came to Ghana we came with a lot of love and intention to change. And we came to stay to change. From the first days that intention, that love, that need was there. We have put up with a lot of rough times in the last 4 months; there are shortcomings here and a lot of work needs to be done. But, it is worth it.

22700 K: It is not that everything is hunky dory. Life here is solitary life as the social structure that we are used to in Europe doesn't exist here. But the end is more important. And our intention was to change. We receive it on a daily basis. The first couple of months were very hard and I kept saying to Benjamin that it would come, and now it is a pleasure. Tomorrow I am giving a talk to the top scientists in FDA. They want to know how they can work with this. Next week we are talking to the top scientists with the Standards Board. They want to bring this into the nation and they see the use of it.

22750 K: Then on Wednesday the 22<sup>nd</sup> the veterinarians of Ghana have organized and are coming to the building I have shown you for us to teach them. They want to know everything they can do with their animals because I gave a small talk a couple of weeks ago. They organized with Carolina for their annual meeting. They want to understand and they are coming to learn. They want to be taught because they have seen the results on the animals. The intention has been there to serve and it is just opening doors with scientific organizations, ministries, scientists in atomic and associated national organizations.

22838 K: I asked Benjamin the other day if he knew how the UC works to bring man through different languages. I have managed in Ghana to bring all the different parts of government and scientific organizations together. And they enjoy being together. They have always been individual (groups). Now we bring them in and we sit and allow them to be together. I brought the unity of scientists in Accra together. This is what I can do. Now the scientists from Japan want to come here. Scientists from other organizations want to come here. So it is unifying the country scientifically in the way we can go; then we can bring in international scientists together. Accra will be the center of excellence in the world for spaceship technology.

22944 K: people will camp across this country just to be here and to serve. And, it's a modern country. It has more highways than Romania and Europe. The position is; *my wish is my command*. I packed my suitcases with Carolina to make a change and we have made changes. It just gets created. In the past 2 to 3 weeks we see it with Benjamin, that all sorts of people coming in from opposite sides, now they are accepting each others' references because we don't have time to do again what the others have done. We take the papers of what they have done; putting this section with that section and it is becoming one nation scientific. This was our intention and we achieved it. Now we achieve more and more.

23054 K: I am here today teaching and there is a lot being done scientifically in the background. The Standards Board is doing everything possible to get this somehow into the open. In the next few weeks it will be in the hands of the president and ministers on how we will handle this. We give it the condition nationally in one go and with it we will go to other nations. When their governments see that we can reduce diabetes, reduce high blood pressure, which cause a lot of damage to the country, then the other countries will want this because they don't have it. Give me 3 months and I will show you. We walk into government administration offices where they have crippled secretaries.

23152 K: Yesterday I was with Benjamin and a couple of weeks in a governmental office they brought a woman in her 50s who has a bad, very painful leg. Everyone knew she couldn't even come in any more. Yesterday where I work as a volunteer we went to the building and the lady who greeted us said she had to get this lady with the painful leg for us to see. That woman came out and she said to Benjamin *thank you for bringing Mr. Keshe here. Now I live and I have no pain.*

23230 K: This technology is not for the elites, it elevates the people. People know they can reduce blood pressures from 180-210 down to the 130s. We see the same kinds of improvements with diabetics, those with HIV/Aids and those with Cancer. So they are feeling it; they understand it because it touches them. Now I am making one unified scientific organization. KF is the pivot point at which they come in and they work together. Their research center and laboratories are being built with all the consultation of all the governmental research institutions. Anybody can come in and say this is what we want to do or whatever, so it is becoming a center of excellence in Ghana for the space technology. I don't talk; I live the life!

23420 Azar: [Right now in NY they are planning for war with Iran. Can we wish for world peace?](#)

23436 K: let me explain something; Iran touches us because we are from that part of the world. We know what is planned for Iran and I explained that recently for the politicians. Iran Central Bank is the last national bank that has not been opened apart from Korea. The only plan is to get to Iran Central Bank and the Iranian central bank directors stupidly a few months ago released the figures of Iran national gold reserves, which is puzzling and beyond imagination and they can confirm the existence. So, the rush to get this gold exists, and under the new administration there is a plan to get it. Rothschilds through Tel Aviv needs to get to it. They emptied the other banks into their accounts. It will not happen!

23530 K: They are doing very well. They have opened centers in Azerbaijan and they have trained people to start riots in Iran. We are aware of everything that is going on in the background. People who are listening on the board know because they work with us. We put direct requests to Netanyahu for peace talks between Iran and Israel. Netanyahu sent it back through his top security officers. *We negotiate with anybody for Iran except Mehran (Mehran Keshe), because he will get it his way in the end.* I will get it my way either way anyway. But maybe some of this pressure is needed to change the position within the Iranian government too. But it will not lead to what they are planning. The pot is getting very heavily loaded in one direction. You will see it.

23630 K: You will see the old trend has been when the US president gets elected most of the world leaders go one at a time to Washington. This time

they had to pay the Japanese president heavily by the American foreign minister if you look the week before, just to get him into Washington (showing) that the new administration is accepted. When you see the posture between the two it speaks huge language. Japan is the master; you paid us to be here. We are here for a photo shoot. How many world leaders have you seen—the Brazilian, the Mexican president even refused to go meet! There is a huge problem not only with the behavior attitude but there is a huge problem in the American administration because of the First Lady of the United States. Her past ...many wives of the presidents would not like to be seen next to her. This is the biggest problem that they keep away from her presence. She has a past that is tainted and a lot of wives of presidents would not like to stand next to her. This is one of the major problems with the present administration.

23752 K: you see it and you will see in a lot of the dinners there is a very clear standing apart. It has nothing to do with outside politics. It is the way the President and the First Lady have stood in their past in their lives. It is discussed and we have heard it among security people. A couple of governments have said they can get the president going but they can't get the wife going so what do you want us to do? Would you like another woman of the same to stand next to the president and the rumors start? There is a huge problem in that administration. They cannot plan a war. The only war that is planned is by Israel against Iran. I said in the conversation that maybe Netanyahu had a bad time with an Iranian girl somewhere down the line. That is where the hatred comes from and it covers the point. We will have to see.

Azar: thank you.

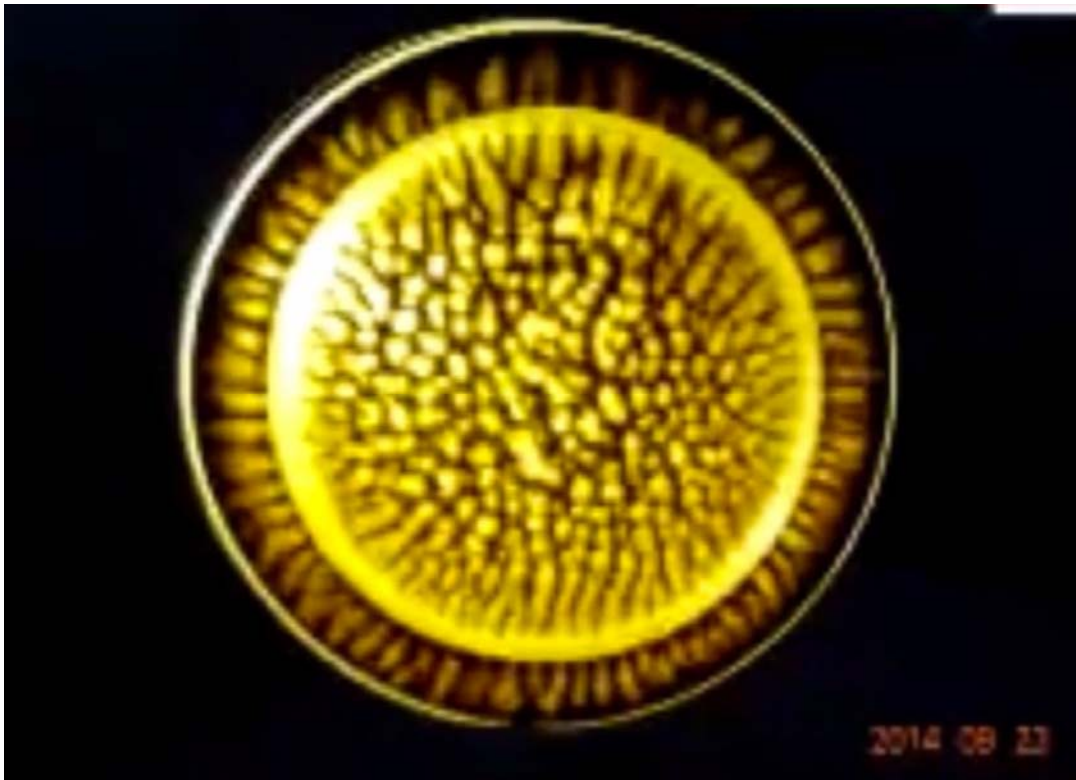

K: you are welcome. Any other questions?

### [Ruthie shows some pictures of GANS](#)

23910 Ruthie: Hi Mr. Keshe, this is Ruthie from China:

K: hi Ruthie, thank you very much for your hard work.

Ruthie: I want to come to the foundation. I want to show you some beautiful pictures from the gans and ask how it came to this color and this shape. It is beautiful but hard to explain and we are wondering about it.

24003 This is the gans of CH<sub>3</sub> in a dark light. My question is why the gans puckers and formed these shapes?

K: you have to look at what is outside of this?

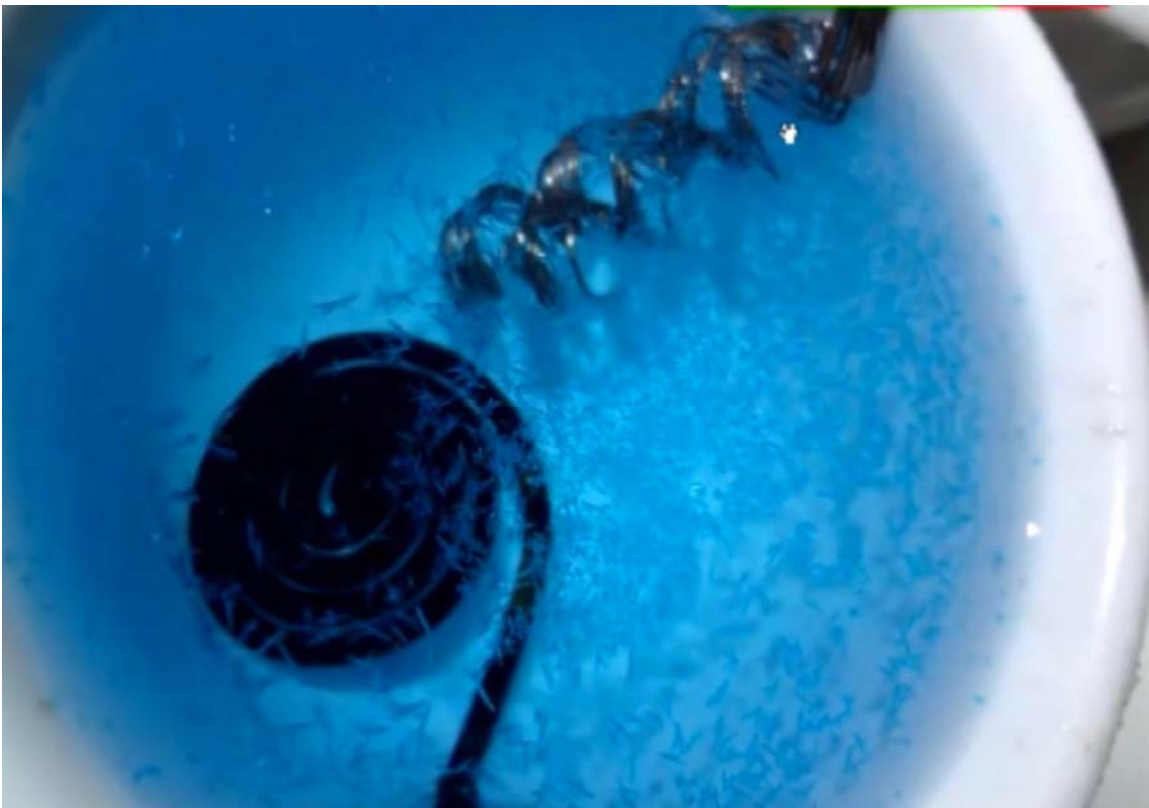

Ruthie: there was nothing. This picture was taken in 2014.

24040 K: this shows a clear connection of fields. But you have to see if this is from a cross section of a plate? This is how the solar system works. I have seen this before. It is the field interaction in the environment outside and central pressure inside. If you look at some of the center points they have the same kind of structure but we see it from the inside out. If you look at the edges outside the rings it looks like flames. This is what we see on the surface. This is how the fields balance each other. Some of these are one single plasma. Most of them are single plasma. If you mix ganses and look at these pictures and then put different gans around them in different shapes or forms you will see they change the pattern. You have to look at where this was done, in what container and what cross section it was and what else was around it.

24225 K: there is something that we notice. A lot of people are taking these electronic data or pictures with high-resolution electron microscopes, and these machines carry huge current through them at high levels and they

interact with your work. They are partially dictating the shape. But this is beautiful and it very much looks like the operation of the center of the solar system. You have a center separation and these are all Magrav positioning. Most of them are a single gans. It is pulled inwards because of the gravitational field forces. Then on the boundary of the bright light is the magnetical. This here (2.43.37 minutes)—this ring here (solid yellow ring) is the boundary of balance between the magnetical and the gravitational. This is totally magnetical. And, then you have to understand the ratio of the surface. Here (in the center) is different ration than here. You are giving much more and in return you are receiving higher fields (outside 'flames'). This is the surface of the earth if you look at it where gravitational magnetic mass is the same and in balance. This is what we call ONG (?) and you can create it anywhere.

24459 Ruthie: I have some others.

R: This is from nano coated copper and copper and the copper is from the electricity wire. Maybe it is not so pure. But you see the gans is not powder it is crystallized. (other pictures of the same gans are shown)

24540 K: what you see on the top is the amino acid. What is inside is mono atomic plasma. I was showing in the factory yesterday to our people, we have a number of tanks with copper connected to different power supply. They were all green and gorgeous like this. I changed the power supply current on one of them and suddenly within minutes, the box became reddish, and the texture changed and we could see flows of amino acid and the rest of it. Then somebody walked into the office and said this is the water that I get from my ground water and it is full of iron. I have taken it to the research lab and they say it has only iron in it. He said *can you help me to get rid of the iron in the water*. It came to me: *hold on, I have been looking for this*.

24658 K: So we set up a box with the water he brought in with iron in it and we put zinc plate and a nano coated copper plate. And I can produce blood out of the water. CH<sub>3</sub> has its own growth and now these iron particles from the water well are part of the structure of the water. I don't need to put a nail in this structure to get the CH<sub>3</sub>. We are looking to see how much blood we can create and what condition is needed to create the blood. Now I don't have to put a nail in the box to get the CH<sub>3</sub>. It is in the structure; So will I create a thick or a thin blood? I don't know. But we will see. This is the first opportunity we have had.

24746 K: So in every experiment you do look at the conditions in the environment. And see why as we saw a couple of weeks ago when someone was showing pictures and there was white material. We notice the bottle next door had zinc in it so you produce two materials. Always learn when you see a container even like this, now that you know you have passed the world of matter, look beyond this container. See what else is sitting around, because the field interaction has a say in what is happening here. If you have a bucket of zinc next to it, or non nano coated copper you are releasing certain availability of the amino acid that is contained and it can absorb different strength so you produce a lot of amino acid in one. But the shade stays at the lower level of copper oxide. Try to look at the environment and the object and then it gives you a very good idea of how the environment has created the object or the condition that you see.

24917 K: what is this picture?

Ruthie: this is the gans after they wash it. It is almost crystallized particles.

K: yes this is from the fast production of ganses.

Ruthie: it is from this.

24942 K: you have to see how fast they produced it. The production of the structured dry gans behavior, I have seen this before. We see this especially in CO2 containers and we see like calcium blocks at the end. You have to see the time it was created, what the condition, what voltage and what was around at the time it was created.

Ruthie: there is no current.

K: yes there is a current, and you don't see it, but you connected the two plates with the wires so there is a current. There is the current flow of the plasma. Thank you very much for your support with the medical side.

25042 Ruthie: yes, I want to announce, there was a cure of a patient with lung cancer only with CO2 gans. So this is the exam report before they used the gans. (2.51.08 minutes). They even told him to try chemotherapy but it didn't work. They took CO2 water and also breathed the air from the humidifier, drank the waters and took baths. And over 1 or 2 months he recovered and the cancer decreased and he doesn't feel pain and became normal. .

25200 K: you realize with a lot of people you say you use CO2, and this is what I keep explaining. When you produce CO2 because of the way you produce CO2 in some cases you don't produce just CO2. Depending on how you connected it you produce a certain amount of ZnO with it and you will find out that CO2 works very effectively with the presence of ZnO if the cancer is emotional. It does the same; you satisfy the emotion and you change the environment; we have seen that before. So, when you put the CO2 on it or use of the CO2 you can add a little bit of ZnO if it is emotional cancer. In satisfying and elevating the emotion the condition of the body changes and the cancer cells cannot exist.

25305 K: we see this in some cases and we see a lot of this especially in China. In China we have seen results even 3 to 4 years ago in the reduction of tumors by 70 to 80% with the use of the CO2 patches. But, you need to understand this part of it. This is quite possible that you have shown me. Behind it is that somehow where the cancer was, what the origin of it was, and if the emotional side was satisfied when you changed the environment.

25342 Brett: Q to Ruthie: can you put this on the testimonial site please?

Ruthie: I will. I have another question about the cancer and the emotion. Is energy healing helpful for that part? From my point of view that energy healing would help the emotional body.

25420 K: partially, but with the gans the body decides and you have no say in it. The body decides if it wants to take it or not.

Ruthie: Also some Chinese patients want to do the injections in China....

K: I have authorized this today.

Ruthie: that is very great news for us. Then people don't have to go to Ghana.

25454 K: we have regionalized now and people don't have to come to Ghana. We have different regions and different doctors are taking over to administer and to see the trial through. In Ghana we handle the Ghanaian situation in Africa if anybody wants to come here. Now if you are in Europe or in America, Australia, Asia or the Middle East, we are trying to find a way for you to stay in those areas. There are a number of doctors in China who work with the work of the KF; find them or get them to organize it and we have made the links for doctors who work with the injections so they can communicate the results. We have some oddity in the past couple of weeks. We went back to Tokyo and they sorted it out. There is no problem and we can supply the injections through China and we can start immediately and Dr. Klaus will set the procedure up.

Ruthie: that is great.

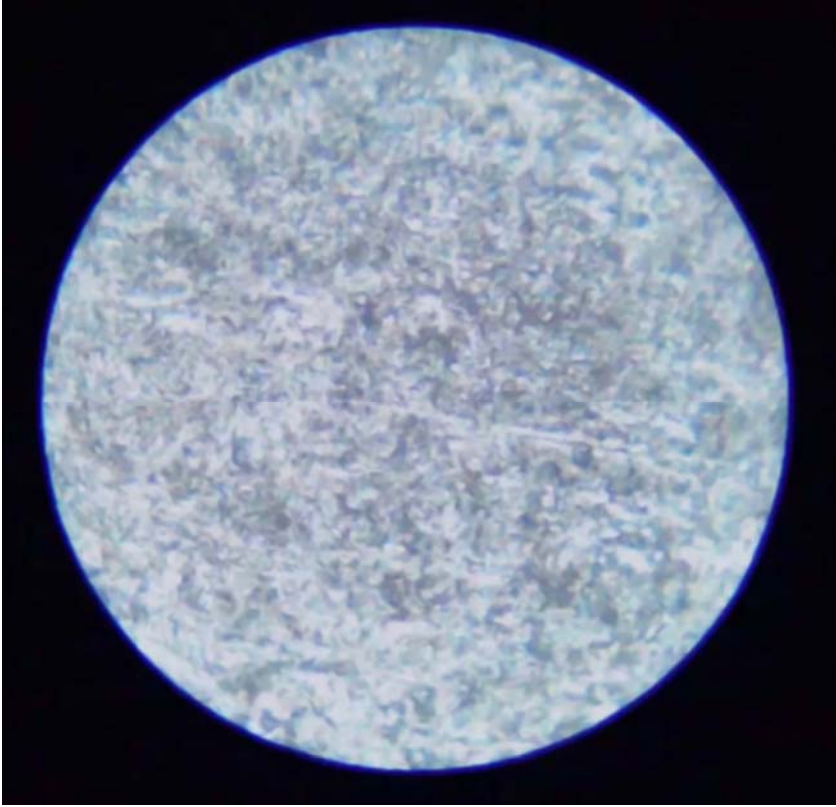

K: we can dispatch the material to the doctors in the next 7 days. Or we can find a way that the people or doctors who understand the technology, there is a pattern they can do to see what it is. We had a case, and others, and we look at each one. In Africa we look at the Ghana side of the work. I was shown a cancer case this week with a very big lump on the head and they wanted to know if we could do anything with this one. If they can work, we will work with them. If you have doctors in China we can get you the agency. Speak to Dr. Klaus as we cleared this yesterday. We want to know where the cancer is and then we advise the doctor who is treating it how to do the treatment.

Ruthie: I will connect him with Dr. Klaus.

K: we will support as many as you like and we will organize for you to receive the injections rapidly. You are just across the water from us.

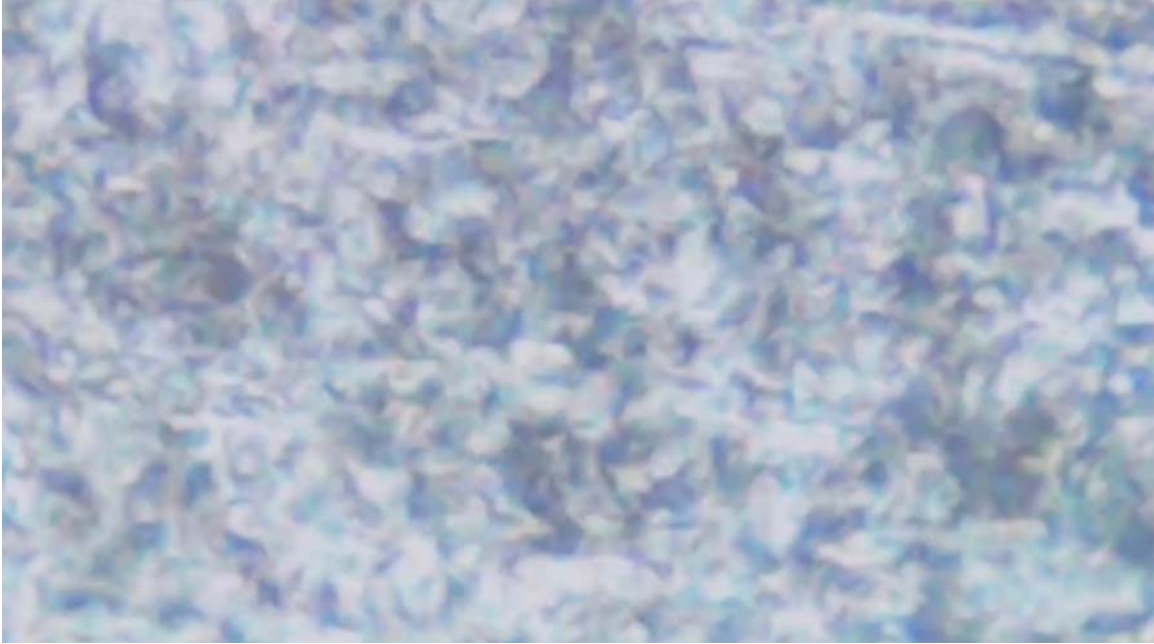

[John shows electron microscope pictures of nano-coated copper](#)

25753 K: would you like to show the pictures of nano material from John?

25900 John: This is 120 times magnification of a nano copper plate that I plated in a long-term system and it took 3 weeks to do the nano coating. What I find interesting about it is the patterns. When we saw the electro micrographs some time ago I think they were too close and all we saw was the crystalline structure. We could not see any pattern in it. This, because it is not quite so close, has a diameter on the plate of about 2 ml. One thing I noticed is the similarity to photographs of the sun. The sun is unfettered free plasma that can do as it pleases. As we create the nano coating over the long term I believe it will adjust itself to this plasma field. Mr. Keshe was describing earlier the fractal nature of the plasma fields. When you look at this and compare it to the sun you can see the demonstration of the fractal nature. We can see pathways and there are patterns within this. It is very interesting, I don't know what we can do with it other than recognize that we have a plasmatic interaction as we create these fields and it is going to reflect whatever plasma flow is in the area. I took a small section of this that is scaled down to fit your screen.

J: This is the resolution and the diameter of this picture is  $\frac{1}{4}$  mm. it is significantly larger and looks very much like the photographs we see of the surface of the sun. The interactions and the plasmatic flows are ‘frozen’ in that nano coating. At least that is the way I view it, perhaps Im not seeing it correctly?

30142 Rick: it dose look like the surface of the sun—the vortexes and the turbulences that you see with the special frequency images they generate.

John: now that I have the equipment I will take pictures of the fast nano coating, very slow nano coating and nano coating that has been used. I want to see if there are changes within the structure in the patterns we are saying.

Rick: Try putting your fingerprint on there and see if it changes the structure.

J: On the energy systems I want to see if we have a plasmatic flow though the nano coating and a direction. Do we see that reflected in the patterns and do the patterns change in response to the flow?

30252 K: if you go back to the original teaching I always say this to the people in the factory: *this is the reason that I always said that when you take the plates out of the caustic or empty the water, immediately put a volt meter on one end and follow all the places in the same direction. The reason is, you homogenize and unify the direction of the flow and each layer will take its position accordingly. So, yes it does, the positioning and structure you*

*are showing us now, by allowing the structure material, the molecular structure is not tight anymore and they are sitting like balls with the distance from each other. When you connect the electric current to it, you touch the bottom layer, the matter state of it, and in that you switch everything to one direction. When you look at the picture it is beautiful as it is, but it goes back on the emphasis that you left it random. If you connect the volt meter....*

30413 Rick: to be clear, you mentioned connecting it to power and you said in the past that it is actually a draining process I think...

K: yes, the power is the battery inside the volt meter; that is all that it is.

John: when you take a voltage reading you are not putting power into the system.

K: no no you realign the layers.

Rick: you mentioned one time that putting power on it would fluff up the layers too much. Draining it would tend to collapse them and make them flatter and smoother.

K: it depends on what you need—it's 'horses for courses.' What do you want to do with the nano material? Do you understand? If you put power on it you realign it and you see these channels and sometimes on the very 'fluffy' nano layers you see the channels of the nano layers.

John: so by draining the plates, I don't know if it will show up on this magnification. I would think that instead of being a random swirling pattern we would see a direction through this. Is that what you are suggesting?

30529 K: yes, exactly. You have to realize that you have to look at it 3 dimensionally. What you see as a layer from the experiments and understanding that we have is about 30,000 to 50,000 layers minimum before you can see the nano-dark material. So each layer has to have its direction, horizontally and vertically. So the plates sit with vertical zig zagging. Depending on how fast you do this, when I used to do more research than I do now, I used to put positive on one end and 10 items or plates on the hook and just touch them one by one and you see them all line up. I used to hang things on the rack the way you would hang laundry on a clothes line. I just start at one end and touch the items one by one. You realign this and it needs to be done. I see a lot of people who say their nano coating doesn't work with a power supply. I ask one question: *in the rush of making the coil did you touch it? Did you put a volt meter across it? You have a confused layer so how do you expect it to give power?*

30704 John: for clarity's sake for those that are viewing this, the dark areas on this plate are 3 dimensional and are deeper into the layer than the bright sections are up on top of the surface. So you can now visualize the up and down portion of this.

This photo is the plate and this is the area that I did the picture on just so you can see where it came from. Thank you it is more food for thought and lots of things to work with. I'll try to get more pictures up and I'm hoping with this magnification we should be able to see alignment and pathways forming in the system. If I can get the camera to sit stable I might be able to get a video of that. We will try that and see what we come up with.

30811 K: thank you, what will be interesting even with what we saw with the pictures from China, is how we can develop systems or fields that we can pull or push certain part of the gans container material. If for example you can attract to bring a layer up or a layer down, or how we can connect so that all the layers behave differently in respect to each other. The game play with the gans materials has never started. None of you have gone to that extent to see how positioning of ganses affect each other. Now with the space technology teaching we need to do this and understand it. We need to

be able to comprehend what we can do and what other opportunities we have with this material. What can we create?

30920 K: We are working in part with the scientists as I said before in the field of farming. It is very interesting; we put CO<sub>2</sub> on the tree, we put a mixture of the ZnO and CH<sub>3</sub> on the roots. What environment do we create because it is not water any more? Would this environment allow other animals to live? Can we put different kinds of gans in different parts to see the changes in the growth? Can we decide one side of the tree will produce more fruit by playing with the strength of the ganses? It is a huge opportunity. It is how you fly in space and how you find places to dip into and submerge. It is not just for seeing it. If you understand it you take one side for coming up and taking off. And you can land and submerge. Then you can emerge.

31037 K: This is all part of the understanding. Do all the gans of a certain layer end up in a different position in the gans? Do the top layers take a position on the boundary? Do the ones that are closer to the matter side layers come to the center? These are all the bits that we learn. We need to develop a visual system for the behavior of the gans in a 3-dimensional system. How do they move and position themselves? Is it a boiling system that ends up with the higher strength to go in the center? Or is it a plasma that dictates from the outside of what is held in the center? **The development of the hydrogen gans is a major step. You have to understand that we don't teach it publicly. We try to avoid teaching it publicly because it is very controversial and is used on some military applications.**

31206 Vivek here: may I ask a question about the alignment process? Right now I have the Magravs coil that is sitting in the drying process after the steaming. I have the wire that is connected to the magnetical lead of the Magrav coil grounded to a copper pipe. Would that cause a different condition or is that okay for the draining process?

K: it is different condition.

V: is it ideal?

K: it depends how you realign it though the layers and I use a volt meter. You can create a loop so that everything has one direction.

V: right now I have left the wire connected to the gravitational lead free to air, and only the wire connected to the magnetical lead is grounded. So I am trying to create the directionality in that way.

31313 K: you can; there is no reason why not, but everything has to be in that direction.

V: no problem; I'll give it a try and report on it.

### [Rick shows bands of gans in a horizontal rotating sphere](#)

31330 Rick: I can show you the video that I took earlier today with a rotating gans ball and the interesting gans rings that formed.

K: go ahead.

31412 Rick: the set up here is a gans ball that you see on the top and its in a lathe, the ball is about a 6 inch diameter ball, fairly large ball. It is rotating at 1000 to 2000 RPMs in this test.

*31440 We have gans of 6 rings separated by water. I was attempting to form 4 gans rings but 6 formed in this orientation. I haven't seen that before with the definite gap between each ring where it is relatively clear between the rings themselves. I thought that was interesting. I think that is because it is on horizontal plane rather than the vertical plane that most of the gans balls are on.*

31644 Vince: I did this a couple of years ago on the vertical with the Jupiter configuration and it was still the same.

Rick: you could have individual rings with a gap in between with the clear liquid in between?

Vince: that's right.

Rick: okay. Well I thought it was interesting in terms of the control. I had to do a special way of getting these – I had to start it up, rev it up, go back down and play with it to get that to form. I tried changing the RPM. Just a few RPMs difference totally changes the structure. Another thing that happens is the caps on each side of the globe start to form a cap on each side which is a little unusual. I didn't notice this before on the vertical gans balls. The cap effect on each side is noticeable with higher light. This gives the opportunity for polarity and the gradient between one cap and the other. I find it a little odd the way the gans behaved in this horizontal configuration. There is a form of control and you can control how many rings are being generated. With this set up you can enter into the sphere with a needle or another probe and touch the rings, extract or add materials to them for further control of the rings.

## Some questions on carbon gans from Wanqing

31058 Wanqing: I have a question on carbon gans that you mentioned in the previous teaching. The gans shows a black color and we would like to know how do we identify this as the carbon gans. In your teaching you said to use the bigger to attach the material. This shows the black. So do we only use this way to identify the carbon gans?

32135 K: I don't understand what you are trying to say. The gans of carbon can even be white. It is not (correct to identify) black as carbon; you can create white carbon gans. In producing the gans of carbon depending on its orientation it gives the color you see. When you produce a lot of pure carbon gans, if you turn it to some lights, you will see them shining in between. Then they show themselves as a grayish color gans. Then if you disturb it or change the field around it they change orientation and color. This is one of the beauties with carbon. Remember you write with carbon and if you create certain pressure on it, then it becomes diamonds and transparent and everything else. If you produce the gans of it very rapidly you end up most likely seeing blocks of gans, of nano material of carbon. With carbon you have to be very, very careful because in itself it creates the property and illusion of different materials.

32333 W: so the color is not only the black.

K: No it is a reflection of the fields around the container also. I did this originally in a way, because I used to be in a different kind of exposure of the technology. At that time I wanted to see if you could produce different colors of diamonds in graphite. And it was successful. You can actually produce different colored diamonds from graphite if you can make it pure enough. When I showed this one in 2005 or 2006 to members of diamond bourse, I showed how you can produce different colored gans or diamonds according to the way you produced the nano material.

32506 K: I have explained this before and I will go a little bit deeper. The Russians have developed a technology on the back of what we developed years ago. It was a system where they buy very cheap diamonds, even some African diamonds with impurities in them and they create a plasmatic condition vacuum, which transfers the mono atomic structure of the impurities inside the diamond to the outside. And suddenly the diamond has no more dark material in it. So, you extract the graphite without doing anything with it.

32550 K: But in that process of extracting mono atomic carbon from the center of the diamond—the stone—it leaves a residue gas mixture that is creating diamonds of new colors which we have never seen before. So if you know the level of the impurity, very minute impurity, in the high temperature popping of the carbon to become a diamond it can give you different color of diamond. For example, if you cut that point of the gas or the impurity from the diamond and it becomes a clear diamond. Suddenly you lose. I see this coming up in the diamond boards. People come up with a pink diamond and they cannot find the mother in the way of the gas point and the diamond cutter in just cutting by accident cuts the point of impurity or the gas and the diamond becomes clear. There is a lot of controversy and people think the diamond was stolen because it was pink when they brought it in.

32703K: in trying to use the plasma technology vacuum of space conditions the Russians have actually patented this. They understood that the impurity in the center of the diamond is plasmatic and more or less gas condition. And, they have created the vacuum condition that extracts similar as we do on the medical side, the taking the center of the seed of the tumor out. In that process because it has to go through the matter state of the diamond, it leaves residue of the gas condition of the carbon itself. And we see beautiful colors of diamonds. I was asked to explain to the diamond bourse how these new colors were coming into operation. I explained in a few minutes that this is what they had achieved through the patents they had in their hands. So you still have the same carbon but when it goes through the matter condition and the boundary it relieves small gas or compounds of plasma the reflection of the light in the stone creates the new color. The same thing happens in your plasma. You can have different gas colors according to the compression of the fields around the gas itself. That is why we have red copper oxide, greenish blue copper oxide, blue copper oxide or black copper oxide. It is no different.

[32845 W: what machine can we use to test the gas?](#)

K: this is going back to what I said and we discussed it earlier. In setting up the spaceship institute research we can develop systems for this. We were talking to FDA and the standard board of management in the last couple of days. They said that we need to develop so we can say this water is the strength of copper. But how much of it do we need? Now we have a water

so you tell us if there is ZnO or CuO in it we have to accept it. We need to develop machinery systems so that we can measure the strength and which strength is good for what and how much of it. This is what the new research center we are building will do. It will develop new technologies for that. We have to do this and it is necessary to develop technologies to measure and quantify. It doesn't exist now. Hopefully we can do this in the near future.

33006 W: so a wife in the kitchen can produce but they cannot identify if what they produce is the correct carbon gans. If they produce a minor reactor, then this is the key point.

33052 K: we need it in so many ways for different application. You are 100% correct. We have to have a measuring system. *I receive the water and I will give my children the taste of orange today. They don't like to drink the orange or maybe they don't like vegetables. Now they can receive the energy of the food. Or so I want to taste beef in the water, or chicken? It is becoming necessary and since we have brought a new technology, we have to make tools for it.* As I said in the discussion experts have been here for a long time. Because we build the machine we have to measure it. Now we need to measure plasma. It has become necessary and in the next months and years technology will develop these things. It is time.

33159 K: come to Ghana as scientists to develop the next step of plasma instrumentation and new ways of doing things that we can put across the world for everyone else to do. And, we will see where we go. We thank all the people who support us heavily in Ghana and across the world. Now we have a center and base where we can do research and development and Ghana is as good as anywhere else. We have the nuclear center, the research center established under European standards, and so why not? I went to see the Chancellor of the university in the south of Italy a couple of years ago. They took me to the Ghana scientific laboratories and I see the same machinery. They have the same standards.

33323 K: Now we have to develop machines to measure the plasma, which was never needed in Ghana before. The reason we have to develop plasma measuring system is that we have no choice. You have to ask President Xi to facilitate this faster! Those Chinese and Koreans who are sitting in the background listening know what we are talking about. This needs the Chinese government support directly from inside at very high levels. The rest of the world is so poor they don't have the money to support. China is

one of the nations that can support the development of this technology and they get the benefit of it.

33406 W: maybe it is our China team responsibility to make a strong push again for development. I have another question about identifying the plasma of the graphite. Which one is in the plasma state?

K: all of them are; matter is a plasma itself, but it is at a different strength. You do some tests and you can see very clearly. If you have made gans of CH<sub>3</sub> and you see the black spots on the bottom. Put a magnet underneath it and if they rotate very vigorously it is not nano material. These are iron particles. But you have some nano materials that by free forces get interactive and move but they move in a different way than the iron moves. **Get iron dust and get some nano CH<sub>3</sub> with the metal at the bottom and see how they behave in respect to the same motion of the magnet.**

33535 K: You produce everything and the only way is when you produce the gans of carbon, if you pick from the top and use a plastic glove and it doesn't leave any dark material on the glove it just slides like a fish. If you go to the bottom of the pile and pick up and rub your finger in it and bring it out of the container, you will see black spots on the glove. This is graphite and graphene at the bottom. When you have the fluff of gans at the top put your hand in it and play with it. It will not make the glove black. It just creates the space gap. But when you have nano material and you have the graphite you will see different colors and textures when you touch it. At the moment this is the only we can test until we develop the equipment for it.

33654 W: when we talk about the difference in them, they are all in plasma state. If we produce the carbon gans, then how about the graphite gans, or how about the nano state? Is graphite in the nano state or mono atomic?

33720 K: you have both. In the carbon you have both. It depends if you use the graphite sticks or did you use the zinc and copper? And then you separate the oxygen from it. Or did you use the copper on its own? There is a fair amount of gans of CO<sub>2</sub> in copper oxide. Quite a lot of it. But you don't see it because the ratio is too vast. If you put your hands in the bottom of the copper oxide and touch it you see that you get black marks on your gloves. You say where does this come from if this is only copper. But, if you look there are some isotopes of copper that are near the zinc and you have the copper plate and the zinc plate now. They convert the CO<sub>2</sub> but the

oxygen transformation is not there so you get pure copper with carbon at the bottom.

W: thank you Mr. Keshe.

### [We must continue with the ethos of the Kf](#)

33838 K: don't forget now that we have launched the construction of the KF Spaceship Institute and the WC and the UC, the establishment of the medical center and the rest, all this goes back on our shoulders. If we want to see this developed, we are doing it, but it is beyond the understanding. If you allow governments to come in and do it, it goes back on the same track. If we do it and the way we carry the ethos of the KF, when there is a conflict as they are planning between Iran and America, you invite them to the table of peace in Ghana to the UC. You invite them to the table of the WC and ask them what their grievances are. Why and what needs to be satisfied? We have come a long way and we are in the first stage of the becoming a space community but these are instruments that we have to set up and work through it to bring it in. No African nation believes in the UN. No Middle East except Israel believes in the works in the UN because it only directs what it wants for the state of Israel and the rest are ignored. The same goes for Asia. As one guy said: *the UN is a white club and the rest follow. We do the killing and we organize the killing.*

34032 K: let's bring peace in the right way through ways of introducing new technologies. That is the only salvation we have. It is time to change with the new technology and the new way of living. Thank you very much for today and hopefully next week we can learn more from each other.

Rick: thank you Mr. Keshe. That is the end of the 159<sup>th</sup> Knowledge Seekers' Workshop, February 16<sup>th</sup> 2017.
